I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Ecuador. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a big and exciting step—congratulations on finishing primary school! In Denmark, you have a few different paths you can take after completing **Folkeskole** (primary and lower secondary school). The right one for you depends on your interests, learning style, and future goals. Here's an overview of your main options, along with guidance based on your background and opportunities:

1. Gymnasiale Uddannelser (Upper Secondary Education)

These are academic paths that prepare you for university.

* STX – Studentereksamen

- Focus: General academic subjects (e.g., humanities, science, social science).
- Best if: You're interested in university later and enjoy subjects like history, languages, biology, or social studies.
- Pros: Broad education, keeps many doors open.
- Possible match if you like thinking critically, reading, and discussing social or global topics (your Ecuadorian background could add a strong multicultural perspective here).

* HHX – Højere Handelseksamen

- Focus: Business, economics, marketing, and international trade.
- Best if: You're interested in business, entrepreneurship, or working with companies.
- Pros: Practical knowledge that also prepares you for university or business life.
- Bonus: Good choice if you're thinking about doing something international (like working between Denmark and Ecuador in business or trade).

* HTX – Højere Teknisk Eksamen

- Focus: Technology, natural sciences, IT, and design.
- Best if: You like tech, engineering, or science.
- Pros: More hands-on than STX, very useful for careers in engineering, programming, and innovation.

* HF – Højere Forberedelseksamen

- Focus: Shorter, more practical, 2-year program (vs. 3 years for the others).
- Best if: You want a faster way to get ready for certain higher educations.
- Pros: Good for people who want a less stressful academic experience or plan to enter healthcare or social work fields.

2. Erhvervsuddannelser (Vocational Education & Training – EUD)

- Focus: Hands-on training for specific careers (electrician, mechanic, hairdresser, chef, etc.).
- Best if: You enjoy learning by doing, and want to start working sooner.
- You can also get into higher education later with a **EUX** path (a combo of vocational training + general subjects).
- Pros: Paid internships (læreplads), real-life experience, faster path to job market.

3. EUX – The Hybrid Path

- Combines vocational training with general education (like gymnasiet).
- Best if: You want to keep doors open (work + university option).
- Example: You train as a carpenter but can still go to university later.

So... What Should *You* Do?

To help you decide, ask yourself:

What are your interests?

- Do you love numbers, solving problems, tech? → **HTX** might be for you.
- Do you like business, selling, or starting something? → **HHX** could be a strong fit.
- Passionate about social issues, language, or history? → **STX** fits well.
- Want a more practical life/job path right away? → **EUD** or **EUX**.

Do you see yourself studying further?

- If yes: Gymnasiale uddannelser are your best bet.
- If no (or not sure yet): EUX is a good middle ground.

Can your multicultural background play a role?

Absolutely! Your bilingual skills and cultural understanding are valuable. You could use that in careers like:

- **International business (HHX)**

- **Social work or education (HF/STX)**
 - **Language and translation (STX)**
 - **Tech for international companies (HTX)**
-

Tip: Use UG.dk

You can explore all educations here: <https://www.ug.dk> (in Danish). It has a personality/interest test too, which might help you.

Would you like help figuring out a specific interest area? I can help you compare options or even walk you through the UG.dk interest test.
