I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Armenia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's a great question—and it's awesome that you're thinking about your future already! Since you've just finished primary school in Denmark (folkeskolen), you're at an important turning point where you'll choose your next educational path. Here are your main options in the Danish system, followed by some recommendations based on different interests:

Main Educational Paths After Primary School in Denmark

1. **Gymnasiale uddannelser (General Upper Secondary Education)**

These are aimed at students who want to pursue higher education (university or similar):

- **STX (Alment gymnasium):** Focus on general academic subjects like science, languages, and humanities.
- **HHX (Højere Handelseksamen):** Focus on business, economics, and international relations.
- **HTX (Højere Teknisk Eksamen):** Focus on technology, science, and technical subjects.
- **HF (Højere Forberedelseksamen):** A shorter, more practical 2-year general education for those who prefer a faster path to higher education.

2. **Erhvervsuddannelser (Vocational Education and Training - EUD/EGU/HTX)**

These are for students who want to enter a skilled trade or job directly after school. You combine school and apprenticeship. Examples:

- Electrician
- Hairdresser
- Mechanic
- Chef
- Carpenter

3. **Kombinerede forløb (EUX)**

A combination of both vocational and general education. You get both a studentereksamen (like STX) and a skilled trade qualification.

What Should You Choose? Depends on Your Goals and Interests:

 If you enjoy school, are curious, and want to keep your options open:

- **STX** is the most general and flexible choice. It prepares you well for almost any higher education.

👉 **If you're interested in business, marketing, or international economics:**

- **HHX** might be perfect. It's also great if you're thinking about starting a business one day.

👉 **If you love technology, science, IT, or engineering:**

- **HTX** is strong in these areas. It's good preparation for tech and science universities or polytechnics.

👉 **If you want to finish fast or didn't like school so much:**

- **HF** is a good 2-year program to keep your options open without a long commitment.

👉 **If you want to work with your hands or get into the workforce sooner:**

- **EUD or EUX** is ideal. With **EUX**, you get both practical skills and a qualification for university.

🔧 **Other Things to Consider:**

- **Language skills:** You're fluent in Danish, which is excellent, and if you also speak Armenian and English, that could open international paths.
- **Financial situation:** Some vocational programs pay you during the apprenticeship.
- **Long-term goals:** Do you dream of university, or do you want to start working and earning earlier?

🌟 **My Recommendation (Based on What You've Shared):**

Since you've completed Danish primary school and are fluent in Danish, you have full access to all education options. Here's a safe, flexible recommendation:

If you're unsure but want to keep all doors open: Go for STX (or HTX if you like science/tech).

But if you already know you want to work with your hands or get into a profession quickly:

Look into EUX programs – they offer a great balance of earning a skilled trade while keeping your path to university open.

Would you like help picking a specific **school** or program in your city? Or do you want to explore what might fit you best based on your **interests or hobbies**? Let me know – happy to guide you further.
