I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Armenia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.  
What educational path would you recommend for me?

That's great that you're fluent in Danish and have a strong connection both to Denmark and Armenia — that kind of cultural background can be a real asset in your future education and career.

In Denmark, after primary school (folkeskole), you generally have a few main educational options depending on your interests and goals. Here's a breakdown of the main paths, along with suggestions tailored to you:

## 1. Gymnasiale Uddannelser (Upper Secondary Education)

These are academically oriented and typically last 3 years. Ideal if you think you might want to go to university later.

### Main types:

- **STX (Almen studentereksamen):** Broad and general, with focus on humanities, social sciences, and natural sciences.
- **HHX (Højere handelseksamen):** Focus on business, economics, and international subjects.
- **HTX (Højere teknisk eksamen):** Focus on technology, science, and innovation.
- **HF (Højere forberedelseseksamen):** 2-year general education for more mature or focused students; good for a faster track to university.

### Recommended if:

You enjoy academic work, want a lot of options later (especially university), and aren't yet sure what job you want.

 **Tip:** STX is the most flexible, but HHX could be great if you're interested in business or international relations (especially with your Armenian background).

## 2. Erhvervsuddannelser (Vocational Education and Training – EUD)

Combines school with apprenticeships. You learn a trade or practical skill.

### Examples:

- Electrician
- Carpenter
- Hairdresser

- IT Supporter
- Health care worker

### Recommended if:

You enjoy hands-on learning, want to start working sooner, or are interested in specific jobs. Many of these can still lead to higher education later (via **EUX** – a combined vocational and academic program).

## 3. EUX – The Hybrid Option

A mix of vocational training **and** academic education. You get both a trade **and** the qualifications to go to university.

### Recommended if:

You want job-ready skills but also want the option to go to university later. Good for ambitious, practical learners.

## What You Might Think About:

Here are some personal questions that might help narrow things down:

- Do you enjoy theory and studying (math, languages, science, etc.), or do you prefer working with your hands or being active?
- Do you think you'd like to go to university in the future, or start working sooner?
- Are you interested in business, technology, health, art, social work, or something else?
- Would you enjoy an international career, or working with languages and cultures?

## With Your Background

Because you're fluent in Danish, born in Denmark, but also have Armenian heritage, you could one day consider careers in:

- **International business or diplomacy**
- **Translation/interpreting**
- **NGOs or human rights**
- **IT or tech (a growing field in Denmark and globally)**

For these, an **STX** or **HHX** might be ideal now, and then you can explore university or professional schools later.

## Next Steps

1. **Visit some local gymnasiums or vocational schools.** Most have info days where you can talk to students and teachers.
2. **Talk to your UU-vejleder (educational counselor).** They can help you figure out your strengths and guide you toward the right education.

3. **Consider job-shadowing** (praktik) if you're curious about a specific career.
  4. **Think about your goals** for the next 5–10 years. It's okay if you're unsure now — the Danish education system is flexible.
