Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Libya. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's a great question — and it's awesome that you're thinking seriously about your future this early. Since you're 16 and just finished primary school in Denmark (which usually ends at 9th or 10th grade), you're at a key decision point in the Danish education system. Here are your main options, and I'll also give you tailored advice based on your situation.

🎓 Main Educational Paths After Primary School in Denmark

1. **Gymnasiale Uddannelser (General Upper Secondary Education)**
   Prepares you for university. Includes:

   - **STX (Studentereksamen)** – Broad academic focus (humanities, science, social studies).

   - **HHX (Higher Commercial Examination)** – Business, economics, and international trade.

   - **HTX (Higher Technical Examination)** – Technology, science, and engineering.

   - **HF (Higher Preparatory Exam)** – Shorter (2 years), more flexible, often for adult learners or those who didn't follow the classic path.

2. **Erhvervsuddannelser (Vocational Education and Training – VET)**
   Combine school with work experience and lead to a specific job qualification (e.g., electrician, chef, carpenter, health care worker). You can still go to university later via **EUX**, a hybrid that combines VET with general upper secondary education.

3. **International or Specialized Programs**
   Some schools offer international programs, especially in big cities. These may help if you're considering studying abroad later.

💬 Based on Your Background & Situation

Since you're fluent in Danish, born and raised in Denmark, and just finished primary school:

- If you enjoy academic subjects and want to keep your options open:
  ➤ **STX** is a solid choice, especially if you're not yet sure what to study at university. It gives you broad skills and opportunities.

- If you're interested in business, entrepreneurship, or economics:
  ➤ **HHX** could be a great fit. It's also a good match if you're thinking about eventually working with international trade or even going back to Libya one day to do business.

- If you're interested in tech, science, or engineering:
  ➤ **HTX** is designed to prepare students for technical and scientific careers and studies.
- If you want to work in a specific job early and maybe earn money soon:
  ➤ **VET/EUX** is a strong option. For example, you could become a skilled craftsman, IT support person, or health care assistant. With EUX, you can also go to university later.

💡 Tips to Help You Decide

1. **Think about your interests** – What subjects do you enjoy most? What do you like doing outside school?
2. **Visit open house events** (åbent hus) at schools nearby — talk to students and teachers.
3. **Talk to a Studievejleder (student counselor)** – Every school has one who can help you match your interests with your options.
4. **Consider your long-term goals** – University? Job soon? Business? Technology? Something else?

🧭 Example Scenarios

- If you like school and subjects like history, languages, biology → **STX**
- If you like business, marketing, and economy → **HHX**
- If you're into machines, computers, or science → **HTX**
- If you prefer learning by doing and want a job sooner → **VET or EUX**

If you tell me more about your interests (subjects you like, careers you're curious about, etc.), I can give you an even more specific recommendation. Would you like to do that?
