

# Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bahrain. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great and important question, and it's wonderful that you're reflecting on your next step thoughtfully! Since you just finished primary school (in Denmark that means **folkeskolen**, typically around 9th or 10th grade depending on your path), you now have several good options, depending on your interests, strengths, and long-term goals. Let's break it down clearly:

## Main educational paths after primary school in Denmark

### 1 Gymnasiale uddannelser (upper secondary education / high school)

These prepare you for university later:

- **STX (Almen studentereksamen)** – A general academic program with many subject combinations (sciences, humanities, languages, social sciences). Good if you like a broad education.
- **HHX (Handelsgymnasium)** – Focus on business, economics, international trade. Great if you're interested in business or marketing.
- **HTX (Teknisk gymnasium)** – Focus on technology, science, and engineering. Good if you like math, physics, IT, design, or technical subjects.
- **HF (Højere Forberedelseksamen)** – A 2-year academic program, more practical, often for people who want a shorter, more applied route to further education.

 These paths generally lead to higher education (university, professional bachelor, etc).

### 2 Erhvervsuddannelser (vocational education and training)

If you're interested in getting job skills directly and possibly combining work and study:

- **EUD / EUX (vocational education + optional academic level)** – You learn a trade (e.g. carpenter, electrician, chef, social & health care, hairdresser) and can often combine it with academic subjects if you want the option to go to university later.

 EUX is good if you want both practical skills *and* the option for higher education later.

## How to choose?

Ask yourself:

- ☒ Do I enjoy academic studies (reading, writing, analysis, theory), or do I prefer hands-on, practical learning?

- ✓ Do I have a sense of a future career (e.g. doctor, engineer, designer, entrepreneur, craftsman, IT specialist)?
  - ✓ Would I enjoy combining school and working (apprenticeships) or focusing on full-time school for now?
  - ✓ What subjects do I like most — science, business, humanities, art, tech?
- 

### Some example scenarios

- If you like science, technology, or engineering → HTX could be a good fit.
  - If you enjoy business, economics, or want to work internationally → HHX might suit you.
  - If you want broad options or aren't sure yet → STX keeps doors open.
  - If you want to learn a trade and start working earlier → EUD or EUX.
  - If you want a shorter and more applied academic route → HF.
- 

### Other things to consider

- You can usually visit schools (åbent hus / open house days) to get a feel for them.
  - Talk to a guidance counselor (**UU-vejleder**) — they can help you match your interests.
  - Denmark's education system is flexible — switching paths later is possible!
- 

### My recommendation:

Since you're fluent in Danish, have grown up in Denmark, and just finished primary school, I'd suggest:

- Consider **STX** or **HTX** if you're interested in a broad or technical academic education and think university might be in your future.
- If you prefer to combine work and study, look into **EUX** — it gives you both vocational skills and the option for higher education.

If you want, you can tell me:

- What subjects or activities you enjoy most?
- Whether you prefer theoretical or practical learning?
- If you have a dream job or area of interest?

I can help narrow it down even more based on your answers!
