

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Grenada. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing that — it's great that you're already thinking seriously about your next steps. Since you just finished primary school in Denmark (which usually means completing **9th or 10th grade**, depending on your path), your next educational step depends a lot on your **interests, goals, and preferred learning style**.

Here's a breakdown of your main options in the Danish education system after primary school:

1. Gymnasiale uddannelser (Upper Secondary Education – General Path)

These are good if you're considering **university later on**, or if you enjoy academic learning.

- **STX (Studentereksamen)** – Broad academic program, strong in humanities, sciences, and social studies. Good if you want to keep your options open.
- **HHX (Higher Commercial Examination Programme)** – Focus on business, economics, marketing. Ideal if you're interested in business or entrepreneurship.
- **HTX (Higher Technical Examination Programme)** – Focus on technology, IT, and sciences. Perfect if you're into engineering, programming, or tech.
- **HF (Higher Preparatory Examination Programme)** – Shorter (2 years) and more flexible. A good option if you want a quicker route to higher education.

Recommended if:

- You want to go to university in the future.
- You enjoy academic subjects.
- You're not yet sure what you want but want to keep your options open.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

Great if you're interested in learning a **trade or practical job**, and want to **start working sooner** or get into a **specific career**.

- Examples: Electrician, chef, mechanic, carpenter, hairdresser, social and health care worker.
- Combines school and paid apprenticeship (praktik).

Recommended if:

- You prefer hands-on learning.
- You want to earn money while you learn.

- You're interested in a specific job or industry.
-

3. Combination: EUX – The best of both worlds

- Combines vocational training + academic courses.
- You get both a vocational qualification **and** a general upper secondary exam (like STX).
- It's harder and more demanding, but gives you access to both university and the job market.

Recommended if:

- You're motivated and hardworking.
 - You want a practical profession but also want to keep the door open to university.
-

Questions to ask yourself:

- Do I want to go to university someday?
 - Am I more hands-on or more academic?
 - Are there careers I'm already interested in (tech, business, healthcare, etc.)?
 - Do I want to work soon or keep studying longer?
-

Personal note – as someone with Grenadian roots:

With your unique background, you might also consider **fields like international business, language and culture, or even diplomacy** down the road. Your bilingual and bicultural experience could be a strong asset.

Final Thoughts

If you're unsure, STX or HF is often a good starting point — they keep your options open while you figure things out. But if you're already leaning toward a specific trade or job, starting with EUD or EUX can get you there faster and more directly.

Would you like help choosing between specific programs, or are there any career fields you're already interested in (like tech, health, arts, etc.)? That could help me give you more tailored advice.
