

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Morocco. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's a great question—and an important time in your life to reflect on your future. In Denmark, you have several good options after finishing **primary school (folkeskolen)**, depending on your interests, goals, and how you like to learn.

Step 1: What are your goals and interests?

Before jumping into a recommendation, think about:

- Do you enjoy academic subjects, or do you prefer more practical, hands-on learning?
- Are you considering a university degree someday?
- Are you more interested in starting work earlier and learning a trade?
- Do you like working with people, technology, creativity, or something else?

Once you reflect on these, it'll be easier to choose a path that suits you. But let me walk you through the **main educational paths in Denmark after primary school**.

Path 1: Gymnasiale uddannelser (Upper Secondary Education)

These are academic programs that usually take 3 years and prepare you for **university**.

Common options:

1. **STX** – General upper secondary school. Broad subjects like languages, social studies, science.
2. **HHX** – Focus on business, economics, and international trade.
3. **HTX** – Focus on technology and natural sciences.
4. **HF** – 2-year program, more flexible, for people who want a shorter academic path (good if you're not sure yet).

Good choice if:

- You enjoy school subjects.
- You might want to go to university later.
- You're still exploring your future options.

Path 2: Erhvervsuddannelser (Vocational Education and Training, VET/EUD)

These programs combine **school and apprenticeship**. You learn a profession (like electrician, carpenter, hairdresser, mechanic, or child care) and often get paid during your internship.

✓ Good choice if:

- You prefer learning by doing.
- You want to work and earn money earlier.
- You like a more hands-on job and know what you're interested in.

Some VET programs can also lead to university later through **EUX**, which combines vocational training with academic courses.

Other thoughts for someone like you

As a 16-year-old in Denmark with Moroccan background, you might also:

- **Use your bilingual or cultural background** to your advantage in areas like translation, teaching, international business, or social work.
- Think about roles that need **intercultural skills**, such as in NGOs, healthcare, or public service.
- If you're interested in **tech**, Denmark is strong in IT, digital media, and engineering.

My suggestion (based on what you've shared)

Since you've just finished primary school and are fluent in Danish, you're in a strong position.

If you **like studying** and want to keep your options open:

👉 **STX or HHX** could be a good choice. STX gives the broadest academic foundation; HHX is great if you're interested in business.

If you **prefer practical learning** and want to work sooner:

👉 Consider a **vocational program (EUD or EUX)**, especially if there's a profession you're already curious about.

Would you like help figuring out your interests or which school options are near you in Denmark? Or are you curious about a particular job or career path? I'd be happy to help you explore further.
