

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Namibia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's a great question—and it's good that you're already thinking carefully about your next step. Since you're 16, just finished *folkeskole* (primary/lower secondary school) in Denmark, and you're fluent in Danish, you have several options available in the Danish education system.

First: What's Your Goal?

Before recommending a specific path, think about these:

- Do you like academic subjects (like languages, science, math)?
- Do you enjoy working with your hands or being active?
- Do you already have a dream job or area of interest (e.g. medicine, IT, mechanics, business, etc.)?
- Do you want to go to university in the future?

Your answers will guide the best path.

Your Main Options After Primary School in Denmark:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are for students who want to go on to higher education, like university.

A. STX (Studentereksamen)

- General and academic.
- Includes humanities, natural sciences, and social sciences.
- Good if you're not sure exactly what you want yet, but plan to study at university later.

B. HHX (Higher Commercial Examination Programme)

- Focuses on business, economics, and international trade.
- Great if you're interested in business, finance, marketing.

C. HTX (Higher Technical Examination Programme)

- Focuses on technology and natural sciences.
- Ideal if you like IT, engineering, or technical subjects.

D. HF (Higher Preparatory Examination Programme)

- Shorter (2 years), more flexible.
- Suitable for students who maybe didn't do so well in school or want a quicker route to certain professions or higher education.

📌 If you think you might want to go to university someday, one of these gymnasiale programs is usually the best route.

2. Erhvervsuddannelser (Vocational Education & Training – EUD/EGU/EUX)

This is for students who want to go directly into a skilled trade or practical job (but you can still get higher education later through *EUX*).

Examples:

- Electrician
- Carpenter
- Mechanic
- Hairdresser
- Health care assistant

EUD (Basic Vocational Education)

- Practical and hands-on.
- You alternate between school and apprenticeships.

EUX

- Combines vocational training **with** a more academic upper secondary education.
- Lets you both learn a trade and keep the door open to university or further education.

3. 10th Grade (10. klasse)

Some students choose an extra year to prepare before moving on. If you're not quite sure what to do yet, this can be a good buffer year to mature, explore your interests, and boost your academic level.

✨ Special Advice for You:

Since you're of Namibian background, you might want to think about:

- Whether you're interested in international studies, development work, or multicultural business—then **HHX or STX with social sciences focus** might be great.
- If you're hands-on and practical, an **EUD or EUX** path could give you real-world skills and good job prospects fast.
- If you want flexibility and you're still unsure, **STX** is the most general and keeps most doors open.

What You Should Do Now:

1. **Visit an "ungdomsuddannelsesmesse" (youth education fair)** or your local *UU-vejleder* (youth education counselor).
 2. **Talk to your school counselor** (UU-vejleder) for guidance.
 3. **Try job shadowing or internships** if you can—see what different jobs are like.
 4. **Think about long-term goals** (even if they change).
-

If you tell me a bit more about your interests—like your favorite school subjects, hobbies, or what jobs you admire—I can give more specific suggestions.

Would you like that?
