

Uddannelsesvalg efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Norway. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great question—and a very important time in your life! Since you've just finished primary school in Denmark (which typically ends around 9th or 10th grade), you now have several solid options depending on your interests, goals, and how you like to learn.

Here's a breakdown of the main educational paths in Denmark after primary school, and which one might suit you:

1. Gymnasiale uddannelser (Upper Secondary Education)

These are academic programs that prepare you for university.

- **STX (Almen studentereksamen):** Broad and academic. Good if you like subjects like history, languages, biology, math.
- **HTX (Teknisk studentereksamen):** Focus on science, technology, and engineering. Great if you're into tech, science, or design.
- **HHX (Handelsstudentereksamen):** Focus on business, economics, and international affairs. Useful if you might want to work with finance, marketing, or business.
- **HF (Højere Forberedelseksamen):** A shorter, 2-year program. More flexible and practical, often for students who want to start studying or working sooner.

Best if: You enjoy school and want to go to university later.

2. Erhvervsuddannelser (Vocational Education and Training - EUD)

A mix of school and apprenticeship. You learn a trade and get real-world work experience.

- Examples: electrician, carpenter, mechanic, hairdresser, chef, social- and health worker.
- Takes 3–4 years depending on the program.

Best if: You like hands-on learning and want to get into the job market earlier.

3. EUX

A combination of vocational training and general upper secondary education. You get a studentereksamen **and** a vocational qualification.

Best if: You want the flexibility to either work in a skilled job **or** go to university later.

Bonus: Norwegian Option

Since your parents are from Norway, you might also consider:

- Studying in Norway later (many programs in higher education are free for Nordic citizens).
- Keeping your Norwegian language skills up, especially if you're thinking of working/studying there in the future.

? Questions to Ask Yourself

- Do you want to go to university eventually?
- Do you prefer practical, hands-on work or academic learning?
- What are your interests? (Tech, people, business, art, helping others?)
- Do you want to start working sooner or study longer?

My Recommendation (Based on What You've Said)

Since you're fluent in Danish, born and raised in Denmark, and have both cultural backgrounds, you have lots of flexibility. If you're not sure what you want yet, I'd recommend:

STX or HHX – because they give you a broad education and keep many doors open.

If you already know you want something more hands-on, then:

EUX – it's a great hybrid path that gives both practical skills and academic options later.

If you'd like, I can help you:

- Compare specific schools near where you live.
- Explore career options based on your interests.
- Create a “pros and cons” list for each path.

Just let me know!
