

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Peru. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself! You're at an exciting stage with lots of options, and the Danish education system offers strong pathways depending on your interests, strengths, and goals. Here's a breakdown of your options after primary school in Denmark, along with guidance based on different goals.

Main Educational Paths After Primary School in Denmark

1. General Upper Secondary Education (Gymnasiale Uddannelser)

These are best if you're thinking about going to university later.

Types:

- **STX (Studentereksamen):** Focus on a broad mix of humanities, sciences, and languages.
- **HHX (Handelsskolens studentereksamen):** Focus on business, economics, and international trade.
- **HTX (Teknisk studentereksamen):** Focus on science, technology, and innovation.
- **HF (Højere Forberedelseseksamen):** A shorter, 2-year general education program (usually for older students or those wanting a faster route to higher education).

Recommended if:

- You enjoy school subjects like languages, science, or social studies.
- You're considering a university degree later (like law, medicine, engineering, business, etc.).

2. Vocational Education and Training (EUD/Erhvervsuddannelser)

This is a great choice if you prefer more practical, hands-on learning and want to work sooner.

Examples of fields:

- Carpentry, mechanics, hairdressing, electrician
- IT support, office work, retail
- Health and care professions (e.g., SOSU – Social and Health Assistant)

Recommended if:

- You want to enter the workforce earlier (many programs include paid internships).
- You're interested in learning by doing and earning while you learn.
- You can still later continue to higher education if you take extra courses (EUX pathway).

3. EUX – Combined Academic and Vocational Program

This combines vocational training **and** academic education so you can go straight to work **or** continue to university.

Recommended if:

- You want the flexibility of both work and university options.
- You're motivated and willing to put in extra effort (EUX is challenging but rewarding).

How to Choose?

Here are some questions to reflect on:

- **Do you prefer theory or practice?** If you love books, discussions, and theory: STX, HHX, or HTX. If you like working with your hands, building things, or helping people directly: EUD or EUX.
- **What subjects do you enjoy most?** Science → HTX; Business → HHX; Broad/general → STX; Caregiving or health → SOSU.
- **Do you want to go to university later?** Then a gymnasial education or EUX is the best route.
- **Do you want to start earning and working earlier?** Then vocational education (EUD or EUX) is better.

My Suggestion (Based on What You Shared)

Since you're fluent in Danish, born in Denmark, and have Peruvian heritage, you may have unique strengths in language, culture, and possibly bilingualism. That could open doors in international business, diplomacy, healthcare, teaching, or social work.

So, possible tailored suggestions:

- **If you're more academic & love learning:**
Try **STX** (broadest) or **HHX** if you're into business or want to use your cultural background in international work.
- **If you want more practical skills but still want to keep doors open:**
Go for **EUX** – especially if you're interested in business, IT, or healthcare.
- **If you're creative or tech-focused:**
HTX could be a great fit.

Tips Moving Forward

- **Talk to a study counselor** (UU-vejledning) – they can help match programs to your goals.
 - **Visit schools** during open house events or "brobygning" (bridge-building) weeks.
 - **Ask yourself where you want to be in 5–10 years:** Working? Studying? Owning a business?
-

Would you like me to help you compare some specific school programs in your area in Denmark? Or are there subjects or careers you're especially interested in?
