

Uddannelsesvalg i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Samoa. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background — that's really helpful. At 16 and finishing primary school (in Denmark, that would be after **9th or 10th grade**, depending on your path), you're now at a big turning point in your education. The great news is that Denmark offers multiple paths based on your interests, strengths, and career goals. Here's a clear overview of your main options:

♦ 1. Gymnasiale uddannelser (Upper Secondary Education)

These are academic upper secondary programs that prepare you for higher education like university.

* STX (Studentereksamen)

- Focus: Broad academic program (humanities, social sciences, and natural sciences).
- Good if: You enjoy general subjects, want flexibility for university later.

* HHX (Higher Commercial Examination)

- Focus: Business, economics, marketing.
- Good if: You're interested in commerce or want to study business later.

* HTX (Higher Technical Examination)

- Focus: Technology, science, innovation.
- Good if: You like STEM, want a future in engineering, IT, or design.

* HF (Higher Preparatory Examination)

- Focus: Shorter (2 years), more practical.
- Good if: You prefer a shorter route, maybe weren't as strong academically in folkeskole, but still want access to higher education.

♦ 2. Erhvervsuddannelser (Vocational Education & Training, EUD)

These are hands-on programs that combine school and apprenticeship with a company.

- Duration: 2–5 years depending on the program.
- Leads to: Jobs like carpenter, electrician, chef, social care assistant, etc.
- Good if: You prefer practical work, want to start earning sooner, or aren't interested in traditional school subjects.

♦ 3. Kombinerede forløb / EUX

A combination of vocational training + **academic upper secondary** education.

- You get both a **trade qualification** and a **studentereksamen**.
- Good if: You want a hands-on job but also keep the option of going to university.

How to Decide?

Here are a few guiding questions:

- Do you enjoy school subjects like math, languages, science, etc.?
- Or are you more practical and enjoy building, fixing, or creating things?
- Are you already dreaming about a career (e.g., nurse, engineer, business owner, designer)?
- Do you want to go to university later, or would you rather start working sooner?

A Suggestion for You

Since you're fluent in Danish, and if you've done well in school and enjoy academic work, you might consider:

- **STX** if you want to keep your options open.
- **HTX** if you're interested in science, IT, or engineering.
- **EUX** if you want a practical skill plus the option of higher education.

But if you're more hands-on and want to start working in a trade:

- Look at **EUD** programs in things like media, technology, health, or hospitality — Denmark has excellent apprenticeships.

Next Step

Talk to a **studievejleder (guidance counselor)** at your current or future school. They'll help you figure out what fits your interests and goals best.

Also, check out www.ug.dk — Denmark's national education guidance website. It has tons of info and a quiz to help match your interests with an education.

Would you like help comparing two or more specific options, or are you interested in careers related to your Samoan heritage or language skills too?
