

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Senegal. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish. What educational path would you recommend for me?

That's a great moment in life to explore your strengths and set a solid direction for your future. Since you've finished primary school in Denmark (typically around age 16), your next educational step would usually be **youth education** (ungdomsuddannelse). You have several good options depending on your interests, goals, and how you like to learn.

Here's an overview of the **main educational paths in Denmark after primary school**, and some advice based on your background and potential interests:

🎓 1. Gymnasiale uddannelser (General Upper Secondary Education)

These are academic programs that prepare you for university. There are different types:

• STX (Almen studentereksamen)

- Broad and academic focus (languages, sciences, humanities).
- Good if you're not sure yet what to study later.
- 3 years.

• HTX (Teknisk studentereksamen)

- Focus on science and technology.
- Good for those interested in IT, engineering, or science.
- 3 years.

• HHX (Højere handelseksamen)

- Focus on business, economics, marketing.
- Great if you're interested in starting a business, working in finance, or international trade.
- 3 years.

• HF (Højere forberedelseksamen)

- Shorter, more practical version (2 years).
- Good if you want to go to university or a profession-oriented education but prefer a less theoretical approach.

2. Erhvervsuddannelser (EUD) – Vocational Education

- You learn a profession (electrician, carpenter, healthcare assistant, hairdresser, etc.).
- Combines school and apprenticeship in a real company.
- You earn money during your apprenticeship.
- Typically takes 3-4 years depending on the trade.

Recommended if:

- You like hands-on work or want to get a job faster.
- You want to become skilled in a trade or practical job with good job security.

3. Kombineret Forløb (EUX)

- A mix of vocational training and academic subjects.
- You get both a studentereksamen (like gymnasium) **and** a trade qualification.
- Good if you want to keep doors open: you can work or go to university afterwards.

How to Choose? Ask Yourself:

1. Do I want to go to university someday?

- If yes → choose STX, HTX, HHX, HF, or EUX.

2. Do I like practical, hands-on work more than sitting in a classroom?

- If yes → EUD or EUX might suit you better.

3. What am I good at and what do I enjoy?

- Science and tech → HTX or EUX tech.
- Business and communication → HHX or EUD office/retail.
- Working with people (health, social work) → STX, HF, or EUD social/health care.

Considering Your Background

Since you're fluent in Danish and born here, you have the same opportunities as any other student. With your Senegalese roots, you also bring unique cultural knowledge and maybe multilingual abilities (like French or Wolof?), which can be a big asset in jobs related to international business, diplomacy, tourism, education, or social work.

My Suggestion (Based on What You've Shared):

If you're **open to university in the future** but still want flexibility and practical skills, **EUX** might be the best of both worlds.

If you're more academically inclined and want to keep all doors open, **STX or HHX** is a great base.

If you want to **work soon and learn on the job**, and you like practical tasks, **EUD** is a strong and respected option with good job security.

Would you like help narrowing this down further based on your interests (like subjects you like, career ideas, or hobbies)?
