

# Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Tonga. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that—it's great that you're thinking seriously about your next step. Since you've just finished primary school in Denmark (which usually ends at 9th grade), you're now at the point where you can choose between several upper secondary education paths. The right choice for you depends on your interests, strengths, and future goals.

Here's a breakdown of your main options in Denmark, along with some advice:

## 1. Gymnasiale uddannelser (General Upper Secondary Education)

These programs prepare you for university. You'll get a **studentereksamen** or equivalent, which allows you to apply to higher education later.

### Main types:

- **STX (Almen studentereksamen)** – broad academic subjects (good if you're interested in humanities, social sciences, or natural sciences).
- **HHX (Højere handelseksamen)** – focus on business, economics, and international trade.
- **HTX (Højere teknisk eksamen)** – focus on science, technology, and engineering.
- **HF (Højere forberedelseksamen)** – shorter (2 years), more practical, suitable if you want a faster route to certain professions or university.

### ✓ Recommended if:

- You like academic subjects.
- You might want to go to university later.
- You're not yet sure what career you want but want to keep your options open.

## 2. Erhvervsuddannelser (Vocational Education and Training - EUD)

Combines school and paid apprenticeships. You'll learn a trade or profession, like becoming a carpenter, electrician, chef, health worker, etc.

### ✓ Recommended if:

- You want to start working sooner.
- You like hands-on work.
- You're interested in a specific trade or job.

💡 You can also take an **EUX** – a combination of vocational training and academic education. It gives you both practical skills and the right to go to university afterward.

## What to consider when deciding:

### 1. What subjects do you enjoy most?

- Science and tech? Look at HTX or STX (science track).
- Business or marketing? HHX might suit you.
- Helping people or healthcare? HF or a vocational path (like SOSU).

### 2. Do you want to go to university later?

- Then STX, HHX, HTX, HF, or EUX are the best options.

### 3. Do you want to work sooner and earn money?

- Then EUD or EUX could be better suited.

### 4. Do you like practical or academic learning?

- Academic = STX, HTX, HHX, HF.
- Practical = EUD or EUX.

## Your background and future

Being fluent in Danish and having Tongan heritage could be a great asset—especially in multicultural workplaces, public service, or international fields. If you're open to it, you might explore:

- International business (HHX)
- Healthcare or social work (EUD or HF)
- Education or teaching (STX or HF leading to university)

## My Advice:

If you're still unsure what career you want, **STX** or **EUX** might be the safest and most flexible paths. They give you both academic knowledge and the option to go to university or start working later.

If you already know you're interested in something specific—like cooking, IT, mechanics, or care work—then **EUD** or **EUX** can get you on that path faster and more directly.

Want help figuring it out based on your interests or what you're good at? I can give a recommendation if you tell me:

- What subjects or activities you like most.
- If you'd rather work with people, technology, nature, etc.
- Whether you want to go to university or start working soon.
