

Uddannelsesvejledning i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bahamas. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great question, and it's fantastic that you're thinking carefully about your next steps! Since you're 16, finished primary school in Denmark, and fluent in Danish, you have several good options depending on your interests, strengths, and career aspirations. Let's break it down so you can consider what suits you best.

Main educational paths after primary school in Denmark

In Denmark, after **folkeskolen** (primary/lower secondary school), most students choose between:

Gymnasiale uddannelser (Upper secondary academic education)

If you enjoy academic subjects and are thinking of going to university later, this is a good route. Examples:

- **STX (Alment gymnasium)** – Broad, general academic education with a mix of sciences, humanities, social sciences, languages.
- **HHX (Handelsgymnasium)** – Focus on business, economics, marketing, international trade.
- **HTX (Teknisk gymnasium)** – Focus on technology, science, and innovation.
- **HF (Højere forberedelseseksamen)** – 2-year program for those who want a more practical academic path or a fresh start.

When this is a good fit:

- You like studying academic subjects
- You're considering university
- You're interested in a broad or specialized academic focus (e.g., science, business, humanities)

Erhvervsuddannelser (Vocational education / EUD)

If you prefer hands-on learning, want to work earlier, or like practical skills, consider vocational training. You can learn a trade (e.g., carpenter, electrician, chef, healthcare worker).

When this is a good fit:

- You prefer practical work over theoretical studies

- You'd like to start earning and working earlier
- You have a clear interest in a trade or craft

Kombinerede forløb (EUX)

This combines vocational training with gymnasium-level academic studies. You get a vocational qualification **and** the right to apply to university.

When this is a good fit:

- You want the flexibility to both learn a trade and have the option for university
- You enjoy both practical and academic learning

Special considerations in your case

Since you have Bahamian roots:

- You might want to consider **international opportunities**, e.g., studying business, languages, or international relations (HHX could be great for that).
- **Language skills:** If you also speak English well (likely, given your background), that's a big advantage — you could consider international programs or schools with English-language focus.
- If you have family or future plans in Bahamas or abroad, an academic education with international focus could keep doors open.

Questions to reflect on

- Do you enjoy theoretical schoolwork, or do you prefer practical tasks?
- Are you thinking about university, or do you want to start working sooner?
- Are there particular subjects you're passionate about (e.g., science, business, technology, design)?

My general recommendation

- ✓ If you're unsure but want to keep as many doors open as possible:
→ **STX** (broad academic) or **HHX** (if you like business/economics/international focus).
- ✓ If you want both academic and vocational training:
→ **EUX**
- ✓ If you know you want to work with your hands or in a specific trade:
→ **EUD**

If you like, I can help you:

- Explore specific schools or programs in your area
- Match your interests with possible career paths

- Find programs with international opportunities

Would you like help with that? Or could you tell me a bit more about your interests and what you enjoy doing in school? 🚀
