

Uddannelsesvalg efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Cameroon. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about yourself — that helps me give you a thoughtful answer! Since you just finished primary school in Denmark (I assume you mean **folkeskole**, or possibly **10th grade**), you're at an important decision point. Let's break down your options, and I'll give you some guidance depending on your interests and strengths.

🎓 Your main educational paths after primary school in Denmark

In Denmark, you generally choose between two broad directions:

1 General upper secondary education (Gymnasiale uddannelser)

→ Prepares you for higher education (university, university colleges)

→ Types:

- **STX** (studentereksamen / general upper secondary school) → broad academic program
- **HHX** (business-focused upper secondary school) → focus on business and economics
- **HTX** (technical upper secondary school) → focus on technology, science, engineering
- **HF** (shorter, 2-year upper secondary) → alternative path, more practical

2 Vocational education and training (EUD / EUX)

→ Prepares you for specific jobs (crafts, trades, technical fields, health, etc.)

→ **EUX** combines vocational education with a general upper secondary exam → keeps doors open for university.

🌟 How to choose?

✅ If you enjoy school subjects, want to keep all doors open, and are considering university later:

→ STX, HHX, or HTX could be a good fit depending on your interests:

- STX if you like languages, humanities, science — broadest option
- HHX if you're interested in business, marketing, international trade
- HTX if you love science, technology, IT, or engineering

✅ If you like practical learning, want to start working earlier or in a specific trade, but maybe also want to keep the option of university open:

→ Consider **EUX** — gives both a vocational qualification and a studentereksamen level diploma.

✅ **If you prefer hands-on work and want to get into a trade or profession sooner:**

→ EUD (pure vocational education) could be great. Many strong professions in Denmark (plumber, electrician, chef, childcare worker, etc.) come from this path.

🌍 **Your background is a strength**

As someone with roots in both Denmark and Cameroon:

- You might have language skills or cultural insight that could be valuable in fields like **international business, diplomacy, teaching, social work, or global health**.
 - You may also be a role model in your community, which could open paths like **education, politics, or community work**.
-

💡 **Questions to reflect on**

- Do you prefer academic study or more hands-on/practical work?
 - Are you interested in science, technology, arts, business, health, or something else?
 - Do you want to go to university later on, or are you more excited about starting work or an apprenticeship sooner?
-

📌 **My suggestion**

👉 Since you're still exploring, **STX or EUX** could be great because they keep many options open.

👉 If you already have a passion (e.g., coding, design, cooking, mechanics), you could go for HTX or a vocational program with EUX.

If you'd like, I can:

- Help you compare specific schools or programs near where you live.
- Help you make a list of pros and cons for each option.
- Share stories of people who chose different paths!

Would you like that? Also, tell me more about what subjects you enjoy most — that will help narrow it down! 😊
