

Uddannelsesvalg efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Egypt. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

Thank you for sharing that context — and congratulations on finishing primary school! 🎉 Since you're at an important decision point, let's break it down so you can choose a path that suits your strengths, interests, and ambitions.

🎯 First, reflect on these questions:

- ✓ What subjects do you enjoy the most? (e.g., science, languages, art, technology, sports)
- ✓ Do you prefer practical, hands-on learning or more academic, theoretical learning?
- ✓ Are you aiming for university later, or would you like to enter the job market sooner?
- ✓ Do you have hobbies or talents you'd like to turn into a career?

📁 Main educational options after primary school in Denmark

Here's an overview of common paths:

1 Gymnasiale uddannelser (Upper secondary school / high school)

If you're aiming for university later, these are good choices. These programs usually last 3 years:

- **STX (studentereksamen)** — Broad academic program with focus on humanities, science, and social sciences.
- **HHX (business-oriented)** — Focuses on economics, business, and international trade.
- **HTX (technical)** — Focus on science, technology, and technical subjects.
- **HF (shorter, 2-year academic program)** — More flexible, sometimes taken by those who prefer a less traditional high school or need a fresh start.

✓ *Good if:* You enjoy academic subjects and want to keep your options open for university.

2 Erhvervsuddannelser (vocational education and training)

These combine school and apprenticeship in a company, so you gain both theory and hands-on skills. Examples:

- Electrician, carpenter, chef, graphic designer, hairdresser, IT-supporter.

✓ *Good if:* You prefer practical learning and want to work sooner.

3 **Kombinerede forløb (EUX)**

This combines vocational training *and* a general upper secondary education. You can both get a skilled trade qualification *and* qualify for university.

✓ *Good if:* You want a trade but also want to keep the door open for university.

Some advice tailored to you

Since you:

- Speak fluent Danish ✓
- Have multicultural roots (which can be a strength in global studies, business, or diplomacy)
- Are at a decision point

If you're not sure yet:

Consider visiting open house days at STX, HHX, HTX, or vocational schools. Many schools let you try "brobygning" (bridge-building programs) or introductory courses. These can help you see what fits.

If you like academic subjects:

STX or HHX would give you strong preparation for university — especially if you're interested in areas like business, economics, law, languages, or science.

If you like technology or science in a practical way:

HTX or EUX could be a great match.

If you want to work sooner and learn by doing:

An erhvervsuddannelse could suit you, with the option of EUX if you want both theory and practice.

Next steps

✓ Talk to a guidance counselor at your local *UU-center* (Ungdommens Uddannelsesvejledning). They can help you map options.

✓ Try out a bridge-building course (*brobygning*) — many 9th/10th graders do this to explore different educations.

✓ Consider where you see yourself in 5–10 years. University? A job? A trade?

If you'd like, tell me:

- What subjects you enjoy most
- What kind of jobs or activities interest you
- Whether you think you want to go to university

...and I can help recommend a more specific path!
