

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from El Salvador. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's great that you're thinking carefully about your next step — and congrats on finishing primary school! In Denmark, after primary school (folkeskole), you typically have a few main educational paths to choose from, depending on your interests, strengths, and future goals. Since you're 16 and fluent in Danish, you have lots of options open. Let me break them down:

1 **Gymnasiale uddannelser (General upper secondary education)**

These prepare you for higher education (university, professional degrees):

- **STX (studentereksamen)** – Broad academic program, good if you want to keep many options open.
- **HHX (business upper secondary)** – Focus on economics, business, marketing — good if you're interested in commerce or management.
- **HTX (technical upper secondary)** – Focus on science, technology, and design — great if you like STEM subjects.
- **HF (higher preparatory exam)** – Shorter (2 years), more practical, often for those who want a more direct path to further education or if you prefer fewer subjects at a time.

👉 *Best for you if:* You like academic subjects and want to go to university or keep your options open.

2 **Erhvervsuddannelser (Vocational education and training - VET)**

These combine school and apprenticeship in a company (EUD). You learn a trade and get practical experience. Areas include:

- Carpentry, electrical work, mechanics, IT support, culinary arts, health care assistant, etc.

👉 *Best for you if:* You want to work with your hands, learn a specific trade, or enter the workforce faster (though you can still take additional courses later to access higher education).

3 **EUX (Combined vocational and general upper secondary)**

This combines vocational training with a studentereksamen-level education, so you get both practical training and qualification for university.

👉 *Best for you if:* You want both practical skills and the option to study further at university later.

✨ Some things to consider

- ✓ What subjects do you enjoy most? (Math, science, languages, business, arts?)
- ✓ Do you prefer theory/academic work or practical, hands-on tasks?
- ✓ Do you have a dream job or field in mind (e.g. engineer, doctor, chef, mechanic, business owner)?
- ✓ Would you like to study or work internationally (maybe even in El Salvador at some point)?

💡 My suggestion

Since you're fluent in Danish and have a multicultural background, you might thrive in a program that allows you flexibility and keeps doors open — for example **STX** (if you like broad academic subjects) or **EUX** (if you like combining practical skills with academic work).

If you already know you want to work in a specific trade, **EUD** is a fantastic choice and Denmark's system is well-respected for it.

If you want, you can tell me:

- 👉 What subjects do you like best?
- 👉 Do you have a dream job or idea for your future?

I can help you narrow it down! 😊
