

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Guyana. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that—you're at an important crossroads, and it's great that you're thinking ahead about your future. Since you're in Denmark, 16 years old, fluent in Danish, and have just completed primary school (which likely includes 9th or 10th grade in the Danish *folkeskole* system), you have a few strong educational paths to choose from. The right one depends on your interests, strengths, and future goals. Here are the main options and some tailored advice:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are the most common paths if you're thinking about university later.

✓ STX (Alment Gymnasium)

- Broadest general education.
- Strong in academic subjects like Danish, English, history, math, science.
- Great if you're not sure what you want yet and want to keep doors open.
- Prepares you well for university.

✓ HHX (Higher Commercial Examination Programme)

- Focus on business, economics, international trade.
- Useful if you're interested in business, marketing, or starting your own company.
- Also prepares for university, especially in business-related fields.

✓ HTX (Higher Technical Examination Programme)

- Focus on science, technology, engineering, and math (STEM).
- Strong choice if you're into computers, tech, or natural sciences.
- Leads to both university and technical careers.

✓ HF (Higher Preparatory Examination)

- Shorter (2 years instead of 3).
- More practical and personal support – good if you prefer a smaller, more focused learning environment.
- Good for adult education or if you want to go to a professional college later.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

If you're more interested in **practical or hands-on work**, this is a strong option.

- Combine school with apprenticeship in a real workplace.
- Can become a **skilled tradesperson** – e.g. electrician, carpenter, hairdresser, chef, or healthcare assistant.
- After completing EUD, you can also take *EUX*, which gives you a high school diploma **and** a vocational qualification – so university is still an option!

How to Choose?

Here are some questions that can help guide you:

Question	Suggestion
Do you enjoy school and want to go to university later?	Choose STX , HHX , or HTX
Are you interested in business and global issues?	HHX could be perfect
Do you love tech, computers, or science?	HTX might be for you
Do you want a quicker, more personal education with less pressure?	HF could suit you
Do you want to work hands-on, earn money, and maybe skip university?	Go for a vocational education (EUD)
Are you unsure, but want to keep your options open?	STX is the safest bet

Extra thoughts – Your background

Being from a Guyanese background gives you a unique perspective and cultural strength that can help you in many careers—especially in international business, diplomacy, healthcare, or social work. If you speak other languages or want to build that skill, **HHX** or **STX** can be great for that.

My Recommendation (based on what you've shared)

If you're open to more academic work and want to keep your options open for university, **STX** is a great all-around choice. If you have a passion (like business or tech), **HHX** or **HTX** could help you dive deeper into those fields. If you want a job earlier and prefer practical work, consider **EUD** or **EUX**.

Would you like help exploring what specific schools in your area offer? Or do you want advice based on a specific interest (e.g. art, business, gaming, science)? Let me know and I'll tailor the recommendation even more.
