

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Hungary. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

That's a great point in life to start thinking about your future. Since you're 16, fluent in Danish, and have just finished primary school (Folkeskolen), you're at the stage where many students in Denmark decide between different upper secondary education options. Your choice should depend on your interests, strengths, and goals.

Here's a quick overview of your main options and some guidance to help you decide:

Upper Secondary Education Paths in Denmark

1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are more academic and prepare you for university.

A. STX (Almen studentereksamen)

- Broad, academic education (Danish, math, science, languages, social science).
- Good if you're unsure about what you want and want to keep many options open.
- Typical duration: 3 years.

B. HHX (Højere handelseksamen)

- Focus on business, economics, and languages.
- Great if you're interested in entrepreneurship, international trade, or marketing.
- Often leads to business-related university programs.

C. HTX (Højere teknisk eksamen)

- Focus on science, technology, engineering, and math (STEM).
- Ideal if you enjoy technical subjects or want to become an engineer or work in IT.

D. HF (Højere forberedelseksamen)

- Shorter (2 years), more practical, and often for students who prefer not to go through 3 years of traditional high school.
- Can be a second chance or a more flexible option.

2. EUD/Erhvervsuddannelse (Vocational Education and Training)

- Combines school and apprenticeship (practical training).
- Prepares you to work in a specific profession (e.g., electrician, chef, hairdresser, carpenter, healthcare).
- You can earn while you learn and still have the option to go to higher education later via **EUX** (a mix of vocational training and general upper secondary education).

3. International Options

- If you speak English well and want a more global path, you could consider:
 - **International Baccalaureate (IB)** in Denmark.
 - Attending an international school.
- Especially useful if you're considering studying abroad in the future.

What Might Be Right for You?

Here are a few questions to help narrow it down:

- **Do you enjoy academic learning and want to go to university later?** → STX, HHX, or HTX.
- **Do you prefer hands-on, practical work and maybe want to start working sooner?** → EUD or EUX.
- **Are you interested in science or tech?** → HTX.
- **Are you drawn to business or languages?** → HHX.
- **Do you want a shorter and more flexible education?** → HF.
- **Would you like an international path?** → IB.

Personalized Recommendation

If you're not sure what you want to do yet, **STX** is a solid choice—it keeps many doors open and gives you time to explore different subjects.

However, if you already know you like something specific (e.g., technology, mechanics, design, cooking), a **vocational education** (EUD or EUX) could be a smart and practical path, especially since you can earn money during your apprenticeship and still have options for higher education later.

If you want, I can help you explore your interests more deeply with a short quiz or checklist to help guide your decision even better. Would you like that?
