

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from United States. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that! Since you're 16, fluent in Danish, and have just finished primary school (which typically ends around 9th or 10th grade in Denmark), you're at a key transition point in the Danish education system.

Here's a breakdown of your main **educational paths in Denmark** right now, followed by some personalized suggestions:

Main Danish Education Options After Primary School

1. Gymnasium (STX, HHX, HTX, HF) – General Upper Secondary Education (3 years)

- **STX** (Almen studentereksamen): Broad and academic; strong in humanities, sciences, and social sciences.
- **HHX** (Højere handelseksamen): Focuses on business, economics, and marketing.
- **HTX** (Højere teknisk eksamen): Emphasizes science, technology, and technical subjects.
- **HF** (Højere forberedelseseksamen): Shorter (2 years); more practical, often for those who want a quicker path to further education or need a more flexible option.

2. Erhvervsuddannelse (VET – Vocational Education and Training)

- Combines school with apprenticeship.
- Leads directly to skilled jobs (e.g. electrician, carpenter, hairdresser, IT-support).
- Can also include routes to further education.

3. IB (International Baccalaureate)

- Taught in English.
- Recognized worldwide.
- Great if you're considering university abroad, especially in the U.S. or UK.

Special Factors for You

- **Bilingual & Dual Cultural Background:** This opens opportunities both in Denmark and abroad, especially in English-speaking countries.
- **You Might Be Eligible for U.S. Citizenship** (if your parents are citizens), which could open affordable education options in the U.S.

Recommendation Paths Based on Your Interests

1. If you like academics and want university later (in Denmark or abroad):

- **STX** (broad, flexible) or **IB** (if you're considering university abroad).
- IB is especially good if you think you might study in the U.S., UK, or elsewhere in Europe.
- STX is excellent for staying in Denmark.

2. If you're interested in tech, science, or engineering:

- **HTX** or **IB with science focus**.
- Both prepare you for technical university programs.

3. If you're interested in business or starting your own company someday:

- **HHX** or **IB with economics/business** focus.

4. If you're more hands-on or want to work sooner:

- **Vocational training (EUD/EUX)**. EUX gives you both vocational training *and* a studentereksamen (academic diploma), which keeps doors open to university later.

Final Tips

- Talk to a **studievejleder (student counselor)** at your school or local ungdomsuddannelse center – they can help you try short internships or trial days at different schools.
- Try to visit some local **gymnasiums** or schools that offer the IB.
- Don't stress too much – in Denmark, you can always switch tracks or take a sabbatical without falling behind in the system.

Would you like me to help you compare some specific schools near where you live? Or are you leaning toward staying in Denmark or going abroad for further education?
