

Uddannelsesvejledning efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Congo. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about yourself — that helps me give you a thoughtful and relevant answer! Since you've just finished primary school in Denmark (which typically means *folkeskole* up to 9th or 10th grade), you're at an important crossroads. Let's look at the main educational paths available to you and what might suit you depending on your interests, strengths, and future goals.

Your main options after primary school in Denmark

Gymnasiale uddannelser (General upper secondary education)

These prepare you for higher education (universities, colleges). There are different types:

- **STX** – General upper secondary school with a broad range of subjects, including sciences, languages, humanities.
- **HHX** – Focus on business, economics, marketing, and international trade.
- **HTX** – Focus on technology, natural sciences, and innovation.
- **HF** – A 2-year general upper secondary education (often for those who want a more practical approach or had challenges in primary school).

Best if you:

- Enjoy academic work and want to go to university later (e.g., law, engineering, medicine, business, social sciences).
- Like having options open while you figure out your future.

Erhvervsuddannelser (Vocational education and training)

These combine school and apprenticeship in a company. You'll work toward becoming, for example, a carpenter, electrician, hairdresser, chef, or IT supporter.

Best if you:

- Prefer practical, hands-on learning.
- Want to start earning while you learn.
- Are interested in a specific trade or craft.

Combination programs (EUX)

This combines vocational training with a higher education entrance exam — so you can both get a skilled trade and be qualified for higher education.

Best if you:

- Want a trade but also want to keep the door open for university or college.

What should guide your choice?

- What subjects do you enjoy most? (math, languages, science, creative subjects?)
- Do you like working practically, or do you prefer academic study?
- Do you have a dream job or field you're curious about?
- How do you like to learn — hands-on or classroom-based?

Other considerations

Since you're fluent in Danish and have a background from both Denmark and Congo, you might consider fields where multicultural understanding is valuable:

- ☀ International business (HHX)
- ☀ Social work, education, or health care (STX/HF, or later vocational health programs)
- ☀ Technology and innovation (HTX, EUX)

My advice

Since you're still young and if you're not sure what you want long-term:

👉 **Consider a general gymnasial education (STX or HHX)** if you want to explore different subjects and keep your options open.

👉 **Visit open house events ("Åbent Hus") at different schools** — they often help a lot!

👉 **Talk to a guidance counselor (UU-vejleder)** — they can help you with local opportunities and applications.

If you'd like, I can help you:

- Make a pros/cons list for STX, HHX, HTX, HF, or vocational school.
- Explore future job options depending on the path.
- Draft questions to ask at open house events.

💬 Would you like help with that? Or do you already have some interests or ideas?
