

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Djibouti. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's great that you're thinking carefully about your next steps! In Denmark, after primary school (folkeskole), you have several good educational options depending on your interests, strengths, and future goals. Let's break it down so you can reflect on what might suit you best.

Main educational paths after primary school (9th or 10th grade):

Gymnasiale uddannelser (General upper secondary education)

- Focus: Academic studies that prepare you for university.
- Examples:
 - **STX (Alment gymnasium)** – broad and academic, with focus on humanities, sciences, and social sciences.
 - **HHX (Handelsgymnasium)** – focus on business, economics, and international trade.
 - **HTX (Teknisk gymnasium)** – focus on technology, natural sciences, and innovation.
 - **HF (Højere forberedelseseksamen)** – 2-year program, often for those who want a shorter upper secondary education before higher education.

 Good if: You enjoy academic subjects and want to keep your options open for university or professional bachelor programs.

Erhvervsuddannelser (Vocational education and training – VET)

- Focus: Combines school and apprenticeship in a company. You learn a trade or profession.
- Examples: Electrician, carpenter, hairdresser, IT-supporter, chef, social and health assistant (SOSU), etc.

 Good if: You like practical learning, want to start working earlier, or want a job-focused education. You can also continue to higher education through eux (a mix of vocational + gymnasium level).

EUX (Erhvervsuddannelse + Gymnasial eksamen)

- Combines vocational training and upper secondary academic studies.
- You get both a journeyman's certificate and a gymnasial degree (so you can go to university too).

✓ Good if: You want both practical skills and the opportunity for higher education.

How to choose?

Here are some questions to help guide you:

- Do you enjoy academic subjects like Danish, math, science, history?
 - Are you interested in learning by doing (practical work)?
 - Do you already have an idea of a career (e.g., doctor, engineer, businessperson, craftsman)?
 - Do you prefer to keep many doors open, or would you like to focus on a trade or skill?
-

Additional thoughts

- Being fluent in Danish is a huge advantage — and your background gives you valuable multicultural skills that are appreciated in many fields (business, diplomacy, healthcare, etc.).
 - Denmark's system lets you change paths later if needed. For example, some VET programs can still lead to higher education.
-

My recommendation

👉 **If you want to keep your options open and enjoy academic learning** → consider **STX, HHX** or **HTX** depending on your interests (general, business, or technology).

👉 **If you're interested in hands-on work or already have a trade in mind** → explore **erhvervsuddannelse** or **EUX** (so you don't limit future studies).

💡 If you'd like, I can help you:

- ✓ Compare STX, HHX, HTX, HF, and VET in more detail.
- ✓ Suggest specific study programs or schools near where you live.
- ✓ Help think about your career ideas and how to reach them.

Would you like help with any of that? Or do you want to tell me about your interests and what you like doing? 😊
