

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Italy. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a big and important decision—thanks for sharing a bit about yourself. Since you're in Denmark and just finished **primary school**, you're likely considering what to do for your **youth education** (ungdomsuddannelse), which typically starts around age 16. Here's a breakdown of your main options and some tailored advice based on your background:

## 🎓 Main Educational Paths in Denmark After Primary School

### 1. STX – General Upper Secondary School (Gymnasium)

- Focus: Academic, broad range (sciences, humanities, social sciences).
- Duration: 3 years.
- Ideal for: Those who want to go to university and aren't sure exactly what to study yet.
- Why it might fit you: It keeps doors open and includes subjects like languages (you might enjoy that with your Italian background).

### 2. HHX – Higher Commercial Examination Programme

- Focus: Business, economics, marketing, languages.
- Duration: 3 years.
- Ideal for: Those interested in business, international trade, or economics.
- Why it might fit you: If you're interested in international business or want to work in something cross-cultural.

### 3. HTX – Higher Technical Examination Programme

- Focus: Technology, natural sciences, IT.
- Duration: 3 years.
- Ideal for: Those who like science, engineering, or tech.
- Why it might fit you: If you're hands-on and enjoy building, experimenting, or problem-solving.

### 4. EUX – Vocational + Academic Combined Path

- Focus: Learn a trade + get academic qualifications.
- Duration: 4-5 years.
- Ideal for: Those who want practical skills + the option for higher education.
- Why it might fit you: If you like learning by doing but want to keep university as an option.

### 5. EUD – Vocational Education and Training

- Focus: Learn a specific job (electrician, hairdresser, carpenter, etc.)

- Duration: 2-4 years.
- Ideal for: Those who want to start working sooner with hands-on skills.
- Why it might fit you: If you're eager to work, are practical, or want to learn in a more direct way.

## **How to Choose – Questions to Ask Yourself**

- Do I enjoy theoretical academic work, or do I prefer hands-on learning?
- Am I curious about a specific career or field (e.g., tech, healthcare, design)?
- Do I want to go to university eventually, or start working earlier?
- Do I enjoy language, international topics, or business?

## **My Recommendation (Based on What You Shared)**

Since you're fluent in Danish, have an Italian cultural background, and just finished primary school, here's what I'd suggest:

**If you enjoy school and want to keep your options open:**

👉 **STX** with a focus on languages or social sciences could be great. You'll get a solid foundation for university, and your bilingual background might give you a boost.

**If you're more interested in the business world or international topics:**

👉 **HHX** could suit you well—especially if you're curious about how companies work, trade between countries (like Denmark and Italy), or entrepreneurship.

**If you're not sure and want to explore different types of learning:**

👉 **EUX** is an underrated option—it gives you both vocational skills and academic credits, so you can decide later whether to go straight into work or continue studying.

Would you like help narrowing it down based on your interests (e.g., what subjects you enjoy, what your hobbies are, or what you see yourself doing in 5–10 years)?
