

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Malawi. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing your background—it's great that you're thinking about your future at this important stage. Since you're 16 and just finished primary school (which usually ends at 9th or 10th grade in Denmark), you're now looking at your next educational step. Here's a breakdown of your main options in the Danish education system and how to think about choosing between them:

1. Gymnasiale uddannelser (Upper Secondary Education)

These are academic tracks that prepare you for university. There are four main types:

- **STX (Almen studentereksamen)** – General academic education with a mix of humanities, science, and social science. Good if you're still figuring out your interests.
- **HHX (Højere handelseksamen)** – Focus on business, economics, and international trade. Good if you're interested in business or finance.
- **HTX (Højere teknisk eksamen)** – Focus on science, technology, and engineering. Good if you like math, science, or technology.
- **HF (Højere forberedelseksamen)** – A shorter 2-year program, more practice-oriented, often used by people who didn't go the traditional route or want to move on faster.

 **Recommended if:** You enjoy academic subjects, are thinking about university later, and like theoretical learning.

2. Erhvervsuddannelser (Vocational Education and Training – EUD/EUX)

This is more hands-on and prepares you for specific careers (like electrician, carpenter, healthcare worker, chef, etc.).

- **EUD:** Focused mainly on learning a trade.
- **EUX:** Combines vocational training with academic subjects – you can get both a trade and a chance to go to university later.

 **Recommended if:** You like working with your hands, want to start working earlier, or are interested in learning a trade while keeping your academic options open (via EUX).

A few personal questions to help guide your choice:

1. Do you enjoy school and learning theoretical subjects (like history, math, science)?

2. Do you already have a dream job or field you're curious about (e.g., medicine, business, IT, fashion, mechanics)?
 3. Would you prefer to go to university one day, or would you rather start working sooner?
 4. Do you enjoy practical work, being creative, or solving real-world problems?
-

Based on your background:

You're fluent in Danish, which is a huge plus. Growing up in a multicultural home also gives you a great perspective that can be valuable in many fields, especially in global industries or social work. If you have interests in **helping people, healthcare, technology, business, or global development**, those can all lead to strong paths.

A few good next steps:

- **Talk to a vejleder (educational counselor)** at your school or local ungdomsuddannelse center.
 - **Visit schools** during open house events (orienteringsaften).
 - **Try a "brobygning" (bridging course)** to get a feel for different programs.
-

Would you like me to suggest a specific path based on your interests or career ideas? Feel free to share what you enjoy doing or subjects you liked in school.
