

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Senegal. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself! Since you've just finished primary school in Denmark (which typically ends after 9th or 10th grade), your next step depends on your interests, goals, and learning style. Here's a breakdown of your main options and what might be best depending on who you are and what you enjoy:

🎓 1. Gymnasiale Uddannelser (Upper Secondary Education)

These are academic paths preparing you for university.

A) STX (Almen Studentereksamen)

- **Best for:** Students who enjoy academic subjects like languages, history, math, biology, etc.
- **Leads to:** University (humanities, sciences, social sciences, etc.)
- **Pros:** Very broad; good if you're unsure what you want yet.

B) HHX (Højere Handelseksamen)

- **Best for:** Students interested in business, economics, or international trade.
- **Leads to:** University or business-related jobs.
- **Pros:** Useful if you're thinking about business, entrepreneurship, or working internationally (maybe connecting Denmark and Senegal!).

C) HTX (Højere Teknisk Eksamen)

- **Best for:** Students who enjoy technology, science, IT, or engineering.
- **Leads to:** Technical university programs or STEM jobs.
- **Pros:** Great if you like hands-on science, robotics, or innovation.

D) HF (Højere Forberedelseksamen)

- **Best for:** Students who want a shorter (2-year) academic education.
- **Leads to:** Certain university programs or professional schools.
- **Pros:** More practical and less theory-heavy than STX.

2. Erhvervsuddannelse (Vocational Education and Training – EUD)

- **Best for:** Students who want to learn a trade or work right after school.
- **Fields:** Carpentry, hairdressing, mechanics, IT support, healthcare, etc.
- **Pros:** You can start earning money sooner, and it combines school with apprenticeships (praktik).
- **Leads to:** Skilled jobs or further training (even higher education if you combine it with EUX).

3. EUX – A Combination of Vocational and Academic Education

- **Best for:** Students who want both a trade qualification *and* a pathway to university.
- **Pros:** Very flexible, but also demanding.
- **Leads to:** Jobs or higher education.

What Should You Choose?

Let me ask you a few questions that might help narrow it down:

- What subjects do you enjoy most?
- Do you like working with your hands, working with people, or working with ideas?
- Do you dream about going to university?
- Are you more practical or academic in your learning style?
- Do you see yourself working in Denmark, Senegal, or internationally?

If you'd like, you can answer those and I can give you a much more tailored suggestion. But based on what I know so far:

General Recommendation

If you're open-minded and do well in school:

→ **STX** is a safe and flexible academic choice.

If you're interested in business or international opportunities:

→ **HHX** could be a great bridge between your Danish background and your Senegalese heritage.

If you prefer hands-on work or want to start working earlier:

→ **EUD** or **EUX** in a field that excites you (like IT, health, construction, or fashion).

Let me know what you're leaning toward or what you're unsure about — and I'll help you figure it out!
