

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Barbados. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great and thoughtful question—well done for thinking ahead about your next steps! Since you've just finished primary school in Denmark and you're 16, it sounds like you might have finished *folkeskole* or a similar program, and now you're at the stage where you're deciding on youth education (*ungdomsuddannelse*). Let's break down your options, and I'll give you some advice based on your situation.

🎓 Main educational paths in Denmark after primary school

1 General upper secondary education (Gymnasiale uddannelser)

- **STX (Almen studentereksamen):** Broad, academically oriented. Good if you like subjects like humanities, social sciences, natural sciences.
- **HHX (Højere handelseksamen):** Focus on business, economics, and international subjects. Great if you're interested in trade, business, or entrepreneurship.
- **HTX (Højere teknisk eksamen):** Focus on technology, science, IT. Good if you enjoy practical science and engineering.
- **HF (Højere forberedelseksamen):** A shorter (2-year) and more practically focused general education, often for those who want a faster path to higher education or need flexibility.

2 Vocational education and training (Erhvervsuddannelser - EUD/EUX)

- Combines practical work (apprenticeships) with school.
- You qualify for specific jobs (e.g., carpenter, hairdresser, electrician, chef, health assistant) or can go further with EUX if you also want a general study qualification.

3 Other options

- **International programs** (e.g. International Baccalaureate (IB)) — good if you want to keep doors open globally, and you might value the international perspective given your Barbadian heritage.
- **Production schools / preparatory education (FGU)** if you want to develop practical skills or need more time to decide.

How to decide?

Here are some things to think about:

- ✓ **Interests** — Do you love academic subjects, or are you more hands-on? Do you see yourself at university, or working and earning earlier?
- ✓ **Strengths** — Are you stronger in languages, science, maths, arts, or practical tasks?
- ✓ **Future plans** — Do you want to study at university in Denmark (or abroad)? Work in a trade? Start a business?
- ✓ **Personality** — Do you like structured study or learning by doing?

☀ **My suggestion based on what you've shared**

Since:

- You're fluent in Danish
- You have an international background (Denmark + Barbados)
- You're considering options carefully

👉 **STX or IB could be great if you want to keep your options open for university or international study later.**

👉 **HGX could be very interesting if you feel drawn toward business, economics, or entrepreneurship.**

👉 **HTX could suit you if you like technology or science.**

👉 **EUX could be awesome if you like practical work but still want the chance for higher education.**

💡 **Next steps**

- ➡ Talk to your school counselor (UU-vejleder) — they can help you figure out what fits.
- ➡ Visit open house events at local gymnasiums or vocational schools.
- ➡ Try out short internships (brobygning / praktik) if possible.

✨ If you want, tell me more about what subjects you like, your hobbies, or what jobs you dream about. That way, I can give even more tailored advice! Would you like help exploring that?
