

# Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Côte d'Ivoire. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

That's a great question — and it's excellent that you're thinking carefully about your next steps! Since you're 16 and have just finished primary school in Denmark (which suggests you might have followed a slightly different path or timing, as most finish primary school earlier), let's look at your options and how you might choose among them.

## Educational paths after primary/lower secondary school in Denmark

After primary school (folkeskole), most students in Denmark choose one of these main paths:

### 1 Gymnasiale uddannelser (Upper secondary academic education)

If you're interested in going to university later, these are good options. The most common types:

- **STX (studentereksamen):** General upper secondary school, with a broad focus on science, social sciences, and humanities.
- **HHX (higher commercial examination):** Focus on business, economics, marketing — good if you like commerce and global affairs.
- **HTX (higher technical examination):** Focus on science, technology, engineering.
- **HF (higher preparatory examination):** Shorter (2 years), more practical, good if you want flexibility or had challenges in folkeskole.

### 2 Erhvervsuddannelser (Vocational education and training / VET)

If you want to get hands-on skills and enter the workforce faster, you could choose a vocational program (e.g. carpenter, electrician, chef, hairdresser, IT support). These often combine school and apprenticeship in a company.

### 3 Combination programs

- **EUX:** Combines vocational training with a study diploma that allows you to go to university later.
- **10th grade:** If you want a year to strengthen your skills before starting upper secondary or VET.

## Since you're fluent in Danish

You can access all these options just like anyone else born and raised in Denmark. You could also take advantage of programs that support bilingual or multicultural students — for example, mentorship or extra guidance if you want it.

## How to choose?

Here are some questions to ask yourself:

- ✓ Do you enjoy academic subjects (math, science, languages, history)?
- ✓ Are you more excited about practical work, creating things, or working with your hands?
- ✓ Do you think you want to go to university eventually?
- ✓ Do you want to work and earn money sooner, or do you want to study longer first?
- ✓ Are you passionate about business, technology, social sciences, arts?

## My general recommendation

If you're unsure, **STX** or **HF** might be good choices — they keep many doors open and give you time to explore what you want.

If you already know you like business or technology, **HHX** or **HTX** could match your interests.

If you want to get a job faster but also keep study options, consider **EUX** — this is a smart combo!

## Your background as a strength

Your Ivorian heritage and Danish upbringing could give you valuable skills — cross-cultural understanding, languages (if you speak French or an Ivorian language), and a unique perspective. These could be assets in areas like international business, diplomacy, teaching, or technology.

 **Tip:** Many schools offer open house events or counseling — visiting and talking to students or teachers can help a lot.

If you'd like, I can help you:

- Compare specific schools or programs near where you live.
- Make a pros/cons list based on your interests.
- Explore career ideas linked to these paths.

Would you like help with that? 😊
