

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Democratic Republic of the Congo. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

It's great that you're thinking carefully about your next steps! Since you've just finished primary school in Denmark (which typically means *folkeskolen* up to 9th or 10th grade), you're now deciding on your *ungdomsuddannelse* — your upper secondary education. Let's go through some options and what might fit you:

Main educational paths after primary school in Denmark

Gymnasiale uddannelser (academic upper secondary education)

These are for you if you enjoy studying subjects like languages, sciences, social studies, or arts and think you might want to go to university later. Examples:

- **STX** (Almen studentereksamen) – broad and flexible, many subject combinations.
- **HHX** (Higher Commercial Examination) – business, economics, marketing focus.
- **HTX** (Higher Technical Examination) – science, technology, and design focus.
- **HF** (Higher Preparatory Examination) – shorter (2 years), for those wanting a university path but maybe didn't finish 10th grade or prefer a different environment.

Erhvervsuddannelser (vocational education and training, VET)

If you like practical work and want to combine learning and earning, you could go for:

- **EUD** (vocational education in trades, crafts, health care, etc.) – leads to skilled jobs (carpenter, chef, social- and health assistant, electrician, etc.).
- Some vocational programmes also allow later entry into higher education.

Kombinerede veje (EUX)

A combination of vocational training and academic study. You get a skilled trade *and* the option to go to university.

How to choose?

Here are some guiding questions:

- **What subjects excite you most?** (e.g. math, science, languages, social studies, arts, technology)
- **Do you prefer practical, hands-on learning or academic study?**

- **Are you thinking about university, or would you prefer to start working after your next education?**
 - **Do you like group work, projects, or more individual study?**
 - **What are your career dreams or interests (even if they feel far away)?**
-

Suggestions for you

Since you're fluent in Danish, you're well-prepared for any of these paths. Given your background, you could consider:

- **STX or HHX** if you're thinking of university and enjoy academic subjects.
 - **HTX** if you're interested in science, technology, or design.
 - **EUX** if you want both practical skills and the option for further study.
 - **EUD** if you want to get into work faster and like hands-on jobs.
-

Extra thought

With your roots in both Denmark and DR Congo, you might also consider paths that could let you combine languages, international business, diplomacy, development work, or technology. HHX or STX with a focus on languages and social studies could be great for that — or HTX if you see yourself contributing in technology or science on an international level.

Next step

- 👉 Visit some schools (many have open house events in the autumn).
- 👉 Try a *brobygning* (intro week at a school).
- 👉 Talk to a *UU-vejleder* (educational guidance counselor).

If you tell me more about what you like, I can help suggest a more specific programme! Do you want to share your favourite subjects or your dream job ideas?
