

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Eritrea. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great question — and it's fantastic that you're thinking carefully about your future at this stage! Since you're 16 and just finished primary/lower secondary school (folkeskolen) in Denmark, your next step would typically be to choose between different **youth education programs (ungdomsuddannelser)**. I'll outline your main options and what you might consider when choosing:

Your main educational paths

Gymnasiale uddannelser (General upper secondary education)

These prepare you for higher education (university or professional bachelor). There are several types:

- **STX (studentereksamen)** — general academic focus with many subjects (languages, science, social studies).
- **HHX (higher commercial exam)** — focus on business, economics, and international trade.
- **HTX (higher technical exam)** — focus on technology, science, IT, engineering.
- **HF (higher preparatory exam)** — shorter (2 years), more practical, often for those who want to qualify for higher education but maybe don't want 3 years of gymnasium.

 *Recommended if:* you like academic subjects, want to go to university or professional bachelor education later.

Erhvervsuddannelser (Vocational education and training / EUD)

This is an apprenticeship model (school + workplace training). You can become, for example, a carpenter, electrician, hairdresser, social- and healthcare assistant, chef, etc.

 *Recommended if:* you like hands-on work, want to learn a trade and start working sooner (though you can also take EUX and keep the door open for higher education).

EUX (combination of vocational and academic)

A mix of vocational training and general subjects that qualifies you for both a trade and higher education.

 *Recommended if:* you want both practical skills and the option to go to university later.

How to choose?

Here are some questions to reflect on:

- ✓ What subjects do you enjoy most? (e.g. math, science, languages, business, hands-on work?)
 - ✓ Do you prefer theoretical/academic learning or practical learning?
 - ✓ Do you want to go to university later or start working sooner?
 - ✓ What kind of work-life do you imagine for yourself? (office, workshop, outdoors, working with people, etc.)
-

Other considerations

- Since you're fluent in Danish and have a multicultural background, you could have strengths in languages, intercultural communication, or international business.
 - Denmark offers good guidance through **UU-vejledning** (youth guidance centers) — have you talked to a counselor?
 - You could also consider *10. klasse* if you feel you need a year to decide or strengthen your academic skills.
-

✨ My suggestion

If you enjoy school subjects and think university could be part of your future, I'd suggest looking into **STX, HHX, or HTX**, depending on your interests.

If you prefer learning by doing, **EUX** is a fantastic option because it keeps your options open.

If you tell me more about:

- 👉 what subjects you like best
- 👉 what kind of job you could imagine
- 👉 how you like to learn

I can give a more tailored recommendation!

Would you like to share that? 😊
