

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Germany. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's a great moment in your life to pause and think carefully—what you choose now can open up many doors. Since you've just finished primary school in Denmark (which typically ends around 9th or 10th grade), you're at the stage where you can choose between several different educational paths. Here's a clear breakdown to help you decide, based on your interests, strengths, and goals:

♦ Main Educational Paths After Primary School in Denmark

1. Gymnasium (STX, HHX, HTX, HF) – Academic Upper Secondary Education

If you're thinking about going to university later, these are your go-to options.

- **STX (Alment Gymnasium):** Focuses on general subjects like science, humanities, and languages. Good if you're still exploring your interests or want flexibility later.
- **HHX (Handelsgymnasium):** Focuses on business, economics, and marketing. Ideal if you're interested in commerce or management.
- **HTX (Teknisk Gymnasium):** Focuses on science, technology, and engineering. Great if you're into math, IT, or natural sciences.
- **HF (Højere Forberedelseksamen):** A shorter 2-year program focused on practical and academic preparation. Good if you want a faster path to higher education or if you didn't do 10th grade.

✓ Best if: You enjoy academic learning and want to go to university later.

2. EUD/Erhvervsuddannelse (Vocational Education and Training)

Hands-on training and internships, usually leading directly to a job. Examples include electrician, carpenter, chef, or healthcare assistant.

✓ Best if: You enjoy practical work, want to enter the workforce earlier, or want to become skilled in a specific trade.

🔄 Bonus: You can also continue to higher education through the **EUX** path (a hybrid of vocational and academic education).

3. EUX – Combining Vocational Training with Gymnasium

This is a hybrid option where you learn a trade **and** get a gymnasium-level education, giving you both work opportunities and access to university.

✓ Best if: You want job skills and the option to go to university later.

4. International or German Schools

Since your parents are from Germany and you're fluent in Danish, you might consider schools with a **German or international focus**, especially if you're interested in working in Germany or studying there in the future. Some Danish schools offer **IB (International Baccalaureate)** or have German-language sections.

✅ Best if: You want a more international or German-speaking education and are open to studying abroad later.

How to Choose?

Ask yourself these questions:

- Do I want to study more theoretical subjects or work with my hands?
- Do I enjoy school, and do I see myself studying at a university?
- Am I more into languages, science, technology, or business?
- Do I want to work sooner, or keep studying?

My Suggestion (Based on What You Told Me)

Since you:

- Are fluent in Danish and likely bilingual with German,
- Are still young and have time to explore,
- Just finished primary school in Denmark (likely 9th or 10th grade),

I recommend considering STX, HHX, or HTX, depending on your interests:

- **STX** if you're not sure yet and want broad options later.
- **HHX** if you're curious about business or economics.
- **HTX** if you're into science, math, or technology.

If you're more hands-on and like the idea of working earlier, **EUX** could be a strong and flexible choice.

Would you like help figuring out which gymnasium track fits you best? Or are you leaning toward vocational training? I can help you narrow it down if you tell me more about your interests or what you enjoy learning.
