

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Jordan. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that! Since you're 16 and just finished primary school in Denmark, you're at a really important turning point. Denmark offers several educational paths after **Folkeskole (primary/lower secondary school)**, and your choice depends on your interests, strengths, and long-term goals.

Here's a breakdown of your options with some guidance:

🎓 1. Gymnasiale Uddannelser (Upper Secondary Education)

If you're interested in **higher education (university or professional degrees)**, this is the most common path.

Main types:

- **STX (Studentereksamen):** Broad and academic – ideal if you enjoy subjects like history, science, or languages.
- **HHX (Higher Commercial Examination):** Focus on business, economics, and international trade – great if you're into finance, entrepreneurship, or global affairs.
- **HTX (Higher Technical Examination):** Focus on science and technology – perfect for future engineers, IT specialists, or health tech.
- **HF (Higher Preparatory Examination):** Shorter (2 years), more flexible – good for people who want to go to university but prefer a different style of study.

● **Recommended if:** You want to keep your options open and possibly attend university.

🔧 2. Erhvervsuddannelser (Vocational Education & Training – EUD)

If you're more interested in **hands-on work** and want to start a career sooner, this is a solid option. You combine school and apprenticeship in a company.

Examples:

- Electrician, carpenter, mechanic
- Hairdresser, chef, health care assistant
- IT supporter, media graphic designer

Some programs even allow you to **go on to further education later**, like becoming a **byggingeniør** (construction engineer) or **IT specialist**.

● **Recommended if:** You like practical work, want to enter the job market earlier, or are interested in skilled trades or technical roles.

✈️ 3. Other options to consider:

- **10th grade (10. klasse):** Some students take an extra year to improve their grades, get more mature, or decide on their next step.
- **Efterskole:** If you want to grow personally, improve social skills, or explore something creative or sporty in a close-knit school environment.
- **IB (International Baccalaureate):** An international program (in English) – great if you want an international career or education abroad.

🕒 How to choose?

Ask yourself:

1. Do I enjoy academic subjects and see myself going to university? → STX, HHX, HTX, HF
2. Do I want to work with my hands, get a job sooner, or learn a trade? → EUD
3. Am I unsure and want time to explore or improve? → 10th grade or Efterskole

✅ My suggestion (based on what you've said):

Since you're fluent in Danish and have a Danish/Jordanian background, you might consider:

- **HHX** if you're interested in business or want to build a career that could be international (useful with your multicultural background).
- **HTX** if you like science, technology, or engineering.
- **STX** if you're not sure yet and want a broad academic foundation.

If you're uncertain or feel like you need a little more time or experience, **Efterskole** or **10. klasse** could be great for developing socially and personally before committing.

If you tell me more about your interests, strengths (e.g. good at math, creative, like helping people), and future dreams, I can give you a more personalized recommendation.
