

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Malta. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish. What educational path would you recommend for me?

Thanks for sharing your background—it's great that you're thinking ahead about your future education. In Denmark, after finishing **primary school (folkeskole)** at around age 16, you generally have a few main options depending on your interests, academic strengths, and career goals. Here's a breakdown of your choices, and I'll offer a recommendation based on your situation.

🎓 Main Educational Paths After Primary School in Denmark

1. Gymnasiale uddannelser (Upper Secondary Education)

These are more academic and prepare you for higher education at university or college.

- **STX (Almen studentereksamen):** General upper secondary school with a broad focus on humanities, sciences, and social studies.
- **HHX (Højere handelseksamen):** Focus on business, economics, and languages.
- **HTX (Højere teknisk eksamen):** Emphasizes natural sciences, technology, and IT.
- **HF (Højere forberedelseksamen):** A 2-year course for students who want a shorter, more practical academic path. Can also lead to higher education.

2. Erhvervsuddannelser (Vocational Education and Training, EUD)

- Combines school and apprenticeship.
- Leads directly to a profession (e.g., electrician, chef, hairdresser, mechanic).
- Some tracks also allow later access to higher education.

3. International Programs

Some international schools in Denmark offer programs like the **IB (International Baccalaureate)** if you're considering studying abroad or want a globally recognized education. This could be appealing given your Maltese background and multilingual skills.

✅ Recommendation Based on You

You're 16, Danish-born, fluent in Danish, and of Maltese descent. You likely have access to good education options. Here's what I'd recommend based on different goals:

If you're unsure but want to keep many doors open:

- **STX** is a safe and versatile choice.
 - It keeps all university paths open.
 - You can choose a line (studieretning) that suits your interests: languages, science, or social studies.

If you're interested in business or international work:

- **HHX** would be a great fit.
 - Strong focus on business, economics, and international perspectives.
 - Could fit well with your multicultural background.

If you're hands-on and like working with technology or doing practical work:

- **HTX** or a vocational education (EUD) could be ideal.
 - HTX if you're interested in engineering, IT, or science.
 - EUD if you're ready to get into a trade or profession directly.

If you want a shorter path or didn't love school:

- **HF** is shorter (2 years), less intense, and still lets you go to higher education.
 - A good option if you want more flexibility or a break from traditional academics.

✨ Other Considerations

- Since you have Maltese roots, you could consider learning **Maltese or Italian** as a third language, or even studying abroad later—HHX or IB could help with that.
- Think about what **subjects you enjoy** and what kind of job you imagine yourself doing in the future.
- Talk to a **UU-vejleder (Youth Guidance Counselor)** at your school. They can help you figure out which programs are available near you and fit your interests.

Would you like help making a chart or comparing the pros/cons of these paths visually? Or want to explore future career ideas based on your interests?
