

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Oman. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that — you're at a really important and exciting crossroads. Since you just finished primary school (which in Denmark includes **Folkeskole** through grade 9 or 10), your next step depends a lot on your interests, strengths, and whether you're more drawn to academic studies, practical skills, or a mix of both.

Here's a breakdown of the main educational paths available to you in Denmark after primary school, with some thoughts on which might fit depending on your goals:

🎓 1. Gymnasium (STX, HHX, HTX) — Academic Upper Secondary School

If you're interested in continuing to university later, this is usually the best route.

- **STX (Almen Gymnasium)** – Focuses on general academic subjects like Danish, history, science, languages, and social studies. Good for broad university access.
- **HHX (Business Gymnasium)** – Focus on business, economics, marketing. Good if you're interested in commerce or international business.
- **HTX (Technical Gymnasium)** – Focuses on technology, science, and innovation. Good for engineering, IT, or tech-related futures.

🧠 Recommended if:

You enjoy academic work, might want to go to university, or are unsure and want to keep your options open.

🔧 2. Erhvervsuddannelse (Vocational Education & Training - EUD)

This is a great path if you prefer learning by doing and want to get a job faster.

- Combines school with practical training (apprenticeships).
- Many tracks: electrician, carpenter, chef, mechanic, healthcare assistant, etc.
- Lasts 2–4 years, and you can earn money during apprenticeship.

🔧 Recommended if:

You're interested in hands-on work or already have a trade or profession in mind.

💡 3. EUX – Combination of Vocational and Academic Education

This is a hybrid between gymnasium and vocational training.

- You get both a studentereksamen and a vocational qualification.
- It's harder work but gives you access to both the job market and universities.

Recommended if:

You want job-ready skills *and* want to keep the door open for university later.

Other factors to consider:

- **Do you want to study internationally later?** STX or IB (International Baccalaureate) might be best.
 - **Do you have a dream job or interest already?** That can guide you.
 - **Do you enjoy structure, or do you prefer learning by doing?** That helps decide between academic and vocational paths.
-

My suggestion for you:

Since you're fluent in Danish, already understand the Danish school system, and are only 16, **starting at a Gymnasium** (probably STX or HTX) is a strong and flexible option. It gives you three more years to explore your interests while keeping doors open for university or other options.

If you already have a clear idea of what you want to do practically (like becoming a mechanic, chef, designer, etc.), then **EUD or EUX** could be great — especially EUX if you want both a trade and academic qualifications.

Want help picking between STX/HHX/HTX? I can help based on your favorite school subjects or interests — feel free to share those!
