

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Tuvalu. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background — that's really helpful for giving you solid advice.

In Denmark, after finishing primary school (folkeskole), you typically have several options depending on your interests, academic strengths, and career goals. Since you're 16, you're right at the stage where you're likely considering **youth education** ("ungdomsuddannelse"). Here are the main paths you could consider:

🎓 1. Gymnasiale uddannelser (General upper secondary education)

These programs prepare you for university and other higher education.

Options:

- **STX** (Almen studentereksamen): Broad academic focus with both humanities, science, and social studies.
- **HHX** (Højere handelseksamen): Focus on business, economics, and marketing.
- **HTX** (Højere teknisk eksamen): Focus on technology, science, and innovation.
- **HF** (Højere forberedelseseksamen): A shorter (2-year) and more flexible general education — good if you want to go to university but not sure what you want to study yet.

Choose this if:

- You enjoy studying and want to keep your options open for university later.
- You're interested in academic subjects like languages, science, business, or tech.

🔧 2. Erhvervsuddannelser (Vocational education and training - EUD)

These programs combine school and paid apprenticeships in a workplace. You finish with a qualification for a specific job (and you **can** still go to university later, especially if you take the **EUX** version).

Examples of careers:

- Electrician, mechanic, carpenter, chef, hairdresser, social/health care worker (SOSU), etc.

EUX:

- A combo of vocational training + academic subjects = gives you both a profession and access to higher education.

Choose this if:

- You want to start working and earning money sooner.
 - You like hands-on learning.
 - You're interested in a specific trade or profession.
-

How to Decide?

Ask yourself:

- Do I like school and theory, or do I prefer practical learning?
 - Do I want to go to university someday?
 - Do I have a specific job or area I'm passionate about?
-

My Recommendation:

If you're unsure right now, **STX or HF** is a solid starting point. It keeps your options open and gives you time to figure out what you're passionate about — especially if you think you might be interested in university later.

But if you're already passionate about a practical career or want to get into the workforce faster, **EUD or EUX** could be a great choice — and there's no shame in going that route. Some of Denmark's most in-demand, respected jobs come from vocational training.

Need help choosing a program or school?

You can use uddannelsesguiden.dk (The Education Guide from the Danish government) to explore schools and programs near you. And many schools offer **open houses** or orientation sessions where you can visit and ask questions.

If you tell me more about what you're interested in (subjects, hobbies, dream jobs), I can give you a more personal recommendation too.
