

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bosnia and Herzegovina. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

That's great that you're thinking carefully about your next step! Let's break it down based on your situation, opportunities in Denmark, and your interests (which you can tell me more about if you'd like!).

Your background

- You've finished primary school (9th or 10th grade) — congrats!
- You're fluent in Danish — this opens all educational options.
- You have a multicultural background — this can be a strength in many fields!

Educational options in Denmark after primary school

In Denmark, you typically choose between these main paths:

1 General upper secondary education (gymnasiale uddannelser)

Good if you want to keep doors open for university or higher education.

- **STX** – general upper secondary school (broad subjects, focus on academic skills)
- **HHX** – business upper secondary school (focus on economics, business, languages)
- **HTX** – technical upper secondary school (focus on science, tech, IT)
- **HF** – 2-year general program (often for adults, but can be an option if you want a shorter path)

 Choose this if you want flexibility and think you might want to go to university or higher studies later.

2 Vocational education and training (erhvervsuddannelser, EUD)

- Combines school + apprenticeship in a company.
- For example: electrician, carpenter, chef, health care assistant, hairdresser, IT supporter, etc.

 Choose this if you want to learn a trade and get practical experience quickly, often with good job prospects.

3 Combination programs

- **EUX** – mix of vocational training + gymnasial level (you get both a trade qualification + can go on to higher education).

👉 *Good if you want both practical skills and the option to study more later.*

☀️ How to decide?

Here are some key questions:

- Do you enjoy academic work, or prefer practical hands-on learning?
- Are you interested in going to university later?
- Do you already have an idea of what kind of job you want (e.g. tech, business, health care, design, crafts)?
- Do you like subjects like math, science, languages, social studies?

💡 My general recommendation (based on what I know so far)

- ✅ If you are unsure and want to keep options open: **STX or HHX** would be great. STX is the most general and gives you a broad foundation.
- ✅ If you know you like technology/science: **HTX** is a strong choice.
- ✅ If you want to combine practical + academic: **EUX** could suit you well.
- ✅ If you prefer to work with your hands and get into the workforce earlier: **EUD** vocational training can be an excellent choice — and there's always the option to continue studying later.

✨ Next steps

- 👉 Visit education fairs (uddannelsesmesser) or open house events at local gymnasier and vocational schools.
- 👉 Try an internship week (praktik) if you're interested in a trade.
- 👉 Talk to a guidance counselor (studievejleder) — they can help you figure out what suits your strengths and interests.

💬 **If you tell me about your favorite subjects, hobbies, or career dreams, I can give you a more personalized recommendation!** What do you enjoy most?
