

# Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Congo. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

Thank you for sharing about yourself — it's great that you're reflecting on your next steps at this important stage! Let's break this down carefully so I can give you a helpful answer.

## Your situation

- ✓ 16 years old, living in Denmark
- ✓ Born in Denmark, fluent in Danish
- ✓ Completed primary school (folkeskolen)
- ✓ Considering your next educational step

## Typical options after folkeskolen in Denmark

After 9th or 10th grade in folkeskolen, most students choose between:

### 1 Gymnasiale uddannelser (upper secondary school, academic focus)

These prepare you for university later.

- **STX:** General upper secondary school (broad academic subjects like languages, science, social studies).
- **HHX:** Business-oriented upper secondary school (focus on economics, marketing, international trade).
- **HTX:** Technical upper secondary school (focus on technology, natural sciences, IT).
- **HF:** Shorter, more practical upper secondary school (often 2 years, for slightly older students or those wanting a different structure).

### 2 Erhvervsuddannelser (vocational education and training - VET)

These combine school and apprenticeship (praktik) in a company.

- You can become e.g. electrician, carpenter, hairdresser, IT-supporter, health care assistant etc.
- Some VET tracks also give you access to higher education via eux (combines VET with gymnasial level subjects).

## How to choose?

Here are questions to reflect on:

👉 **Do you enjoy academic subjects like languages, history, science, or maths?**

➡ STX, HTX, HHX could be good — depending on which subjects excite you.

👉 **Are you interested in business, marketing, or economics?**

➡ HHX could fit well.

👉 **Are you drawn to technology, science, or hands-on experimentation?**

➡ HTX might be great.

👉 **Do you prefer learning by doing, working with your hands, or entering the workforce faster?**

➡ A vocational education (erhvervsuddannelse) might suit you — and you can combine it with eux if you want university access later.

👉 **Do you feel unsure and want to keep options open?**

➡ STX or HHX keep broad paths open. Or consider a 10th grade (efterskole or 10th class) if you want more time to decide.

🌱 **Additional advice**

✅ Since you are fluent in Danish and have roots in both Denmark and Congo, you might have strengths in languages, cultural understanding, or international perspectives — this can be valuable in business, diplomacy, education, or social work.

✅ If you enjoy working with people, consider tracks that lead to teaching, nursing, social education, or psychology.

✅ If you enjoy practical, hands-on work and want to start earning sooner, vocational education could be very rewarding.

💡 **What could be a good next step for you?**

👉 **If you like academics, but don't know exactly what you want:** STX or HHX

👉 **If you like technology or science:** HTX

👉 **If you like practical work, and maybe earning sooner:** VET with or without eux

👉 **If you feel unsure:** Consider taking 10th grade to explore and mature your ideas.

If you'd like, you can tell me:

- What are your favorite subjects?
- What kinds of jobs sound exciting to you?
- Do you prefer working with people, machines, computers, ideas, or something else?

I can help you narrow it down even more! ✨
