

Uddannelsesvalg i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from France. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about your background! It sounds like you're at an exciting point in your life, and you have some great opportunities ahead. Let's break down your situation and look at possible educational paths in Denmark that might suit you.

General educational structure after primary school in Denmark

After completing *folkeskolen* (primary/lower secondary school), you usually choose between two main directions:

- 1 **General upper secondary education** → prepares you for university
- 2 **Vocational upper secondary education** → prepares you for a trade or profession, often with an apprenticeship

✨ Options you could consider

1 General upper secondary education

Since you're fluent in Danish and have a multicultural background, these could suit you well:

- **STX (Almen studentereksamen)** – the most common upper secondary program, broad academically with subjects in humanities, sciences, and social sciences. Great if you want to keep your options open for university.
- **HHX (Higher commercial examination)** – focuses on business, economics, languages, and international studies. Given your French-Danish background, this could be an advantage if you're interested in international business or economics.
- **HTX (Higher technical examination)** – focuses on science, technology, and innovation. Suitable if you like STEM subjects (science, tech, engineering, maths).

👉 All of these typically last 3 years and end with a diploma (*studentereksamen*) that qualifies you for higher education.

2 Vocational education and training (EUD/Erhvervsuddannelse)

- Combines school and apprenticeship (praktik)
- Prepares you directly for a specific profession (e.g. chef, carpenter, graphic designer, IT support)
- Usually 3-5 years depending on the trade

- You can still later pursue higher education in some cases, especially through *EUX* (combines vocational training with general upper secondary courses)

3 International or bilingual education

Given your French roots:

- **International Baccalaureate (IB)** at a Danish *gymnasium* offering IB – in English, with international recognition. Good if you consider studying abroad later.
- **French schools / Lycée français in Denmark** (e.g. Prins Henriks Skole in Copenhagen) – if you want to strengthen your French academic background.

What to think about

- ✓ **Your interests** — Are you more drawn to languages, sciences, business, technology, arts?
- ✓ **Your future plans** — Do you want to go to university, or are you more hands-on and eager to start working?
- ✓ **Environment** — Do you prefer a more theoretical/academic setting or practical/apprenticeship-based learning?
- ✓ **Mobility** — Would you like the option of studying in France or another country later?

Possible path for you

Based on what you've shared (Danish-born, French parents, fluent in Danish, just finished primary school):

- 👉 **STX or HHX** — both would give you a broad education and keep doors open, plus you can choose focus areas that match your strengths (e.g. languages, social sciences, or economics).
- 👉 **IB** — if you're interested in international opportunities or studying abroad later.
- 👉 **EUX** — if you like the idea of combining practical skills with academic qualifications.

If you'd like, I can help:

- Compare specific schools near where you live
- Suggest focus lines (e.g. science line, language line, etc.)
- Give examples of what a typical week looks like in each program

Do you already have an idea of what subjects or future careers interest you? That would help narrow it down! 🚀
