

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Kenya. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that — and congrats on finishing primary school! That's a big step. Since you're in Denmark and just finished *folkeskole* (primary and lower secondary school), you're now at the point where most young people choose between a few different educational paths. What's best for you depends on your interests, strengths, and future goals — but I can guide you through your main options and help you think it through.

🎓 Your Main Options After Primary School in Denmark

1. Gymnasium (STX, HHX, HTX, HF)

If you're academically inclined or think you might want to go to university later, one of the upper secondary school tracks is probably right for you:

- **STX (Almen gymnasium)** – Broad academic focus: humanities, science, and social sciences. Great for general university preparation.
- **HHX (Handelsgymnasium)** – Focus on business, economics, and languages. Good if you like commerce or want to work in business or finance.
- **HTX (Teknisk gymnasium)** – Focus on science and technology. Great if you're into engineering, IT, or science.
- **HF (Højere forberedelseseksamen)** – A shorter 2-year academic program, more practical, often used by students who want to move into professions or further vocational education later.

2. EUD – Erhvervsuddannelse (Vocational Education and Training)

This is a great path if you're interested in a specific trade or profession and want to get to work sooner. You do a combination of school and apprenticeship.

Examples:

- Electrician
- Mechanic
- Carpenter
- Hairdresser
- Health care assistant

You can also later take a **EUX**, which combines vocational training with a more academic program — giving you both a trade and the option to go to university.

3. 10th Grade

You also have the option of taking **10. klasse**, which can give you a bit more time to explore your options, improve your grades, or prepare for gymnasium or vocational school. Some schools also offer special 10th-grade programs that focus on entrepreneurship, international focus, or creative subjects.

How to Choose?

Here are a few guiding questions you can ask yourself:

What are you interested in?

- Do you like school subjects like math, science, or literature? → Consider STX, HTX.
- Are you curious about business or languages? → HHX.
- Do you want to work with your hands or in a specific trade soon? → EUD or EUX.
- Not sure yet? → 10th grade or HF could give you time to explore.

Do you enjoy practical, hands-on work?

If yes, vocational education might suit you well. You can always go back for more school later, especially with EUX.

Do you already have a career dream?

If yes — even something general like "I want to work in healthcare" or "I like working with computers" — that can help narrow your options.

A Suggestion Based on What You've Said

You've just finished folkeskole, speak fluent Danish, and have a multicultural background — that's a strong foundation. Since you're still young (16), you don't have to rush into one path, but here's a **safe and flexible recommendation**:

 **Consider starting in 10th grade** if you're unsure about what to do next. It gives you time to grow, improve academically, explore different subjects, and decide if gymnasium or vocational school is better for you.

Then, from there, you can go to **STX**, **HTX**, or **EUX** — depending on what you learn about yourself.

If you want to tell me more about what you enjoy (hobbies, favorite school subjects, dreams for the future), I can help you narrow it down even more.
