

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Maldives. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that—it's great that you're thinking carefully about your next step. Since you're 16 and just finished primary school (which likely includes 9th or 10th grade in Denmark), you're now at a key decision point in the Danish education system.

Here are your main options, along with some guidance based on your background and potential interests:

1. Gymnasiale Uddannelser (Upper Secondary Education)

These are academic high schools that prepare you for university. Choose this if you're interested in further academic studies after high school.

Options include:

- **STX (Studentereksamen)** – General upper secondary education with a wide range of subjects.
- **HHX (Højere Handelseksamen)** – Focus on business, economics, and languages.
- **HTX (Højere Teknisk Eksamen)** – Focus on science and technology.
- **HF (Højere Forberedelseseksamen)** – Shorter (2 years), more flexible, often for people who want to study at university but may not want a full 3-year program.

➔ **Good for you if:** You enjoy school subjects like science, math, languages, or social studies, and you're open to going to university later.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

This path combines school with hands-on job training (apprenticeship). It can lead to a skilled trade or other professional roles, and in some cases, you can still go to university afterward.

Examples:

- Electrician, carpenter, mechanic
- Hairdresser, chef, healthcare assistant
- IT technician, office administrator

➔ **Good for you if:** You prefer learning by doing and want to start working sooner, or you're interested in a specific trade.

3. EUX – Combination of Vocational and Academic Education

EUX is a hybrid: you get both a vocational qualification **and** a high school diploma. It's more demanding but keeps your future options open.

➡ **Good for you if:** You want job skills **and** the option to go to university later.

What to Consider When Choosing:

- **What are your strengths and interests?** (E.g., do you like math, languages, helping people, building things?)
- **Do you want to go to university in the future?**
- **Do you want to start working sooner or study longer?**
- **Do you want a balance (EUX)?**

Recommended Next Steps for You:

1. **Talk to a school counselor (UU-vejleder)** – They're trained to help you navigate this exact decision.
2. **Visit open house events (Åbent Hus)** at local STX, HTX, HHX, or vocational schools.
3. **Try internships or short job placements (Brobygning)** to test different fields.
4. **Use guidance sites like:**
 - ug.dk – Official Danish education and career portal

Example Pathways Based on Different Interests:

Interest	Suggested Path
Science, tech, or engineering	HTX or EUX-technical
Business or languages	HHX or STX
Helping people or healthcare	HF, EUD (social og sundhed), or EUX
Working with hands/tools	EUD (crafts or tech)
University studies later	STX, HHX, HTX, or EUX

If you tell me more about what you enjoy doing—subjects you like, hobbies, any jobs you've thought about—I can give more personal advice too.
