

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Morocco. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing a bit about your background — that helps a lot in giving you a useful answer. Since you're 16, just finished primary school, and are fluent in Danish, you're at a key moment to shape your future. Let's look at your main options in Denmark's education system after primary/lower secondary school (*folkeskole*) and what might fit you best based on different goals and interests.

🎓 Main Educational Paths After Primary School in Denmark

You typically have **two main directions** to choose from:

1. Gymnasiale uddannelser (General Upper Secondary Education)

These programs prepare you for university or other higher education. They last about 3 years and are more academic.

- **STX (Almen studentereksamen)**
 - Broadest academically.
 - Good if you're interested in humanities, natural sciences, or social sciences.
 - Leads easily to university.
- **HHX (Højere handelseksamen)**
 - Focuses on business, economics, and international trade.
 - Great if you're interested in business, entrepreneurship, or economics.
- **HTX (Højere teknisk eksamen)**
 - Focus on technical subjects like science, technology, and engineering.
 - Ideal for future engineers, IT specialists, or lab work.
- **HF (Højere forberedelseksamen)**
 - A 2-year option that's a bit less theoretical than the others.
 - Often used by people who want to continue but aren't sure what they want to study yet.

Best for:

If you enjoy academic subjects, want to go to university, or aren't yet sure what career to choose.

2. Erhvervsuddannelser (Vocational Education and Training – EUD/EUX)

These programs prepare you directly for a job. They combine school and apprenticeship in a company.

- **EUD (Erhvervsuddannelse)**

- Focused on trades like carpentry, electrician, mechanic, hairdresser, healthcare assistant, etc.
- Leads directly to work but some programs can also lead to further study.

- **EUX**

- A mix of vocational training and a general upper secondary education.
- Takes longer, but gives you both job skills and access to higher education.

Best for:

If you want to get into the job market faster or prefer hands-on work, but still want the option to study more later.

What Should You Choose?

Here are some questions to help you decide:

- **Do you like studying academic subjects?**

→ Consider **STX**, **HHX**, **HTX**, or **HF**.

- **Do you enjoy hands-on work or want to start working sooner?**

→ Look into **EUD** or **EUX**.

- **Are you interested in business or economics?**

→ **HHX** or **EUX Business** could be great.

- **Do you enjoy science or tech?**

→ **HTX** or a technical **EUX** track might suit you.

- **Not sure yet?**

→ **HF** or **EUX** keeps more doors open while giving you time to figure it out.

Personal Advice Based on What You Shared

Since you're fluent in Danish and have a multicultural background, you might have strong communication skills, adaptability, and a wider cultural perspective — all great assets in education and work.

If you're unsure and open to both academic and practical paths, **EUX** is a really smart choice: it gives you practical job training plus access to higher education later.

If you like school and might want to go to university (even if you're not 100% sure what to study yet), **STX** or **HHX** gives you a strong foundation and lots of flexibility.

Next Steps

1. **Talk to a school counselor or UU-vejleder** (Ungdommens Uddannelsesvejledning) – they can guide you based on your local options.
2. **Visit schools during open house events** (åbent hus) – get a feel for the place and what students say.

3. **Think about what subjects and activities you enjoy most** – that's a clue to your path.

Would you like help exploring one of these paths in more detail — like what it's like to study HHX or what careers EUD can lead to?
