

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Papua New Guinea. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background! You're at an exciting point in life — finishing primary school and planning your next steps in Denmark. At age 16, your main educational options fall under **secondary education (ungdomsuddannelse)** in Denmark. Here's a breakdown of the paths you can consider, along with recommendations depending on your interests, strengths, and future plans.

Main Educational Paths in Denmark (After Primary School / Folkeskole)

1. Gymnasiale uddannelser (General Upper Secondary Education)

These are academic paths that prepare you for university.

- **STX (Studentereksamen):** Broad, academic. Good if you're interested in humanities, sciences, or social studies.
- **HHX (Higher Commercial Examination):** Focuses on business, economics, and international trade.
- **HTX (Higher Technical Examination):** Focus on technology, natural sciences, and innovation.
- **HF (Higher Preparatory Examination):** A 2-year general path, more flexible. Good if you prefer a slightly shorter program or a different learning style.

Best if you: Want to go to university later, enjoy studying academic subjects, and are still exploring your interests.

2. Erhvervsuddannelse (Vocational Education and Training – VET)

- Combines school and apprenticeship.
- You learn a specific trade like electrician, mechanic, chef, health care assistant, etc.
- Takes 3–5 years depending on the trade.

Best if you: Prefer hands-on work, want to enter the workforce faster, or have a clear interest in a specific profession.

3. Kombinerede forløb (EUX – Vocational + Academic)

- Mix of VET and general academic subjects.

- You get a vocational qualification **and** the right to go to university.

Best if you: Want both practical skills and the option to study later.

How to Decide?

Here are a few questions to guide your decision:

- Do you enjoy academic subjects like languages, science, math, or history?
 - Do you prefer learning through doing (praktisk læring)?
 - Are you already interested in a specific career or field (e.g., tech, health, business)?
 - Do you want to go to university later or start working sooner?
-

My Recommendation for You

Since you're fluent in Danish, born and raised in Denmark, and just finishing primary school:

If you're curious, academically inclined, and unsure of a specific profession:

→ **STX or HF** could be great starting points. These give you broad options later.

If you're practical, like working with your hands, or already interested in a trade:

→ **Erhvervsuddannelse (VET)** or **EUX** is an excellent choice — respected and career-ready.

If you're interested in business or tech:

→ Consider **HHX** or **HTX**, depending on your interest in commerce or science/tech.

A Note on Identity & Opportunity

Your background as a Danish citizen with Papua New Guinean roots is a strength — it can give you a unique perspective in areas like **international business, diplomacy, education, or cultural work**. If that interests you, paths like **STX, HHX**, or even **international studies** in university later could be ideal.

Would you like help choosing between specific programs, or want to talk about your interests and what kind of life or job you imagine for yourself? That would help me give even more tailored advice.
