

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Samoa. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself! You're at an exciting stage, and it's great you're already thinking about your next steps. Since you've finished primary school in Denmark (Folkeskole), you now have a few good educational options, depending on your interests, strengths, and long-term goals. Here's a breakdown of the main paths you can consider in Denmark at 16:

1. Gymnasium (STX, HHX, HTX, or HF) – Academic Path

If you're aiming for a university education in the future, gymnasium is a solid next step. There are different types, depending on what subjects interest you most:

- **STX** (Alment Gymnasium): General academic education. Good if you're not sure yet what you want to study later.
- **HHX** (Handelsgymnasium): Focuses on business, economics, and marketing. Great if you're interested in trade or entrepreneurship.
- **HTX** (Teknisk Gymnasium): Focuses on technology, science, and engineering. Ideal if you like science, IT, or mechanics.
- **HF** (Højere Forberedelseseksamen): A 2-year program, more practical and shorter than the others. Good if you want to move into professions quickly or need a more flexible option.

 **Good for you if:** You enjoy schoolwork, are academically inclined, and might want to go to university later.

2. Erhvervsuddannelser (EUD) – Vocational Education

If you want to get a job and learn practical skills sooner, this is a great path. You can train to become anything from an electrician, carpenter, chef, to a social- and health care assistant.

- Starts with basic courses and then you spend time in internships (praktik).
- You can also take a combined **EUX** program, which gives you both a vocational qualification and a chance to go to university.

 **Good for you if:** You prefer hands-on work and want to start working earlier but still want options for further education.

3. Creative or Specialized Schools

If you're into arts, design, music, or performance, there are folk high schools or talent-based programs (like MGK for music or design-focused schools) that might be a fit.

 **Good for you if:** You're passionate about creative fields and want to develop your talent.

A few other things to consider:

- Since you're bilingual and come from a multicultural background, you could explore careers where this is an asset: social work, teaching, translation, diplomacy, etc.
 - Denmark has a very flexible education system – it's possible to change paths later.
 - Many schools offer **brobygning** (bridging programs) or **introforløb** (intro courses) where you can try out different programs before choosing.
-

My recommendation:

If you're unsure what career you want but enjoy academic learning, I'd suggest starting with **STX** or **HHX**, depending on your interests. If you're more practical and want job experience earlier, try a **EUD** or **EUX** program — especially if there's something specific (like cooking, mechanics, or IT) that excites you.

Would you like help deciding based on your interests or strengths (like favorite subjects or hobbies)? That could help narrow it down.
