

Uddannelsesmuligheder efter grundskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Angola. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing about yourself — that gives a great starting point for advice! Since you've just finished **primary school in Denmark** at age 16, you're now at the stage where most young people choose a **youth education (ungdomsuddannelse)**. Let's break down the options and factors that can help you decide what's best for you.

Main educational paths after primary school in Denmark

Here are the most common options:

Gymnasiale uddannelser (Upper secondary education / high school)

If you're interested in academic studies and maybe university later, consider:

- **STX (Alment gymnasium)** – broad academic program (humanities, sciences, social sciences)
- **HHX (Handelsskole)** – focus on business, economics, and international trade
- **HTX (Teknisk gymnasium)** – focus on technology and natural sciences
- **HF (Højere Forberedelseseksamen)** – a 2-year program, good if you want a shorter academic path (often for slightly older students or those wanting flexibility)

Who is this good for?

If you enjoy school subjects like Danish, English, math, science, history, social studies — and if you might want to go to university later.

Erhvervsuddannelser (Vocational education and training - VET)

You can start learning a trade while still getting schooling. These combine practical work (apprenticeships) and classes.

Examples:

- Carpenter
- Electrician
- Hairdresser
- Chef
- IT supporter
- Healthcare assistant

→ Who is this good for?

If you like practical, hands-on learning and want to move toward a skilled profession. There are also pathways from VET to higher education if you decide later you want more schooling.

3 Kombinerede forløb / EUX

Some programs combine **VET + gymnasium-level studies** — EUX. You get both a trade qualification and the possibility of entering university later.

→ Who is this good for?

If you want to keep your options open — both practical skills + academic qualifications.

☀ What should you consider?

Ask yourself:

- ✓ What subjects or activities do I enjoy most? (e.g., sciences, arts, working with my hands, business)
- ✓ Do I see myself going to university, or would I prefer working sooner?
- ✓ Do I like learning mainly from books and lectures, or through doing and trying things out?
- ✓ Are there particular careers that interest me (e.g., engineer, teacher, entrepreneur, technician)?

💡 My recommendation

Since you are fluent in Danish and finished primary school in Denmark, you have strong opportunities ahead.

- **If you are curious about university, like academic subjects, or aren't sure yet — STX or HHX is a safe, flexible choice.**
- **If you want a faster route to a job or like practical work — explore VET or EUX.**

👣 Next steps

- Talk to your school counselor (studievejleder) — they can help match your interests with options.
- Visit **uddannelsesmesser (education fairs)** and **open house events** at local gymnasiums or vocational schools.
- You can try a **brobygning (bridging course)** — a short trial at a school to see what fits.

If you tell me more about:

- 👉 What subjects you like
- 👉 What kind of work you imagine doing
- 👉 If you want to stay in Denmark long-term or consider working internationally

... I can help you narrow it down even more!

Would you like to explore that together? 😊
