

Uddannelsesvalg i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Australia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing about your background! It's great that you're thinking carefully about your next steps. Since you're 16 and have completed primary school in Denmark, you're likely at the point where you're choosing between different *ungdomsuddannelser* (youth education options). I'll break down the main paths you could consider, and give some tailored advice based on your situation:

Main educational options in Denmark after primary school

Gymnasiale uddannelser (General upper secondary education)

These prepare you for university:

- **STX (studentereksamen)** – the general upper secondary school, broad academic subjects.
- **HHX (Higher Commercial Examination)** – focus on business, economics, and international studies.
- **HTX (Higher Technical Examination)** – focus on technology, science, IT, and engineering.
- **HF (Higher Preparatory Examination)** – shorter (2 years), for those wanting a more practical academic path.

Erhvervsuddannelser (Vocational education and training, EUD)

These combine school with apprenticeships and prepare you for a trade or technical job (e.g. carpenter, electrician, chef). You can also take *EUX*, which mixes vocational training with the option to qualify for university later.

Your international background

Since you have Australian roots, you might want to:

- ✓ Keep doors open for higher education both in Denmark and abroad (e.g. Australia).
- ✓ Build strong language and cultural skills that could be valuable internationally.

What path might suit you?

If you enjoy academic subjects and want flexibility:

- STX is the most common and broad, great if you're unsure exactly what you want to study later.
- HHX could be ideal if you're interested in business, international trade, or economics.
- HTX fits well if you're into science, tech, engineering, or design.

If you prefer practical, hands-on learning:

→ EUD or EUX could be great, especially if you want to learn a craft or trade but still keep the door open for further studies. EUX can be a really smart choice for this.

Other factors to consider

- Do you want to study or work internationally later? Then gymnasiale uddannelser (especially STX or HHX) give you good options.
 - Are you motivated by practical work or apprenticeships? Then vocational routes could suit you better.
 - Do you want to move quickly toward the job market, or are you thinking about university?
-

My recommendation

 Since you're fluent in Danish, have an international background, and just finished primary school, I'd recommend looking into:

- **STX or HHX** if you want broad, academic skills and to keep international study options open.
- **HTX** if you love science/tech/design.
- **EUX** if you're drawn to hands-on learning but also want university as an option.

It might be a good idea to visit some schools (many have open houses in the autumn) or talk to a guidance counselor (*studievejleder*) to get a feel for the environment!

 *If you want, I can help you list specific schools in your area, or help you weigh options based on your interests — for example, if you enjoy science, art, languages, or business. Let me know!*
