

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bangladesh. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's great that you're thinking carefully about your next steps! Since you've just finished primary school in Denmark (which usually ends at grade 9 or 10, depending on your path), you now have several good options depending on your interests, strengths, and long-term goals. Let's break it down to help you choose.

Your main options after primary school in Denmark

Gymnasiale uddannelser (Upper secondary school / high school)

These are for you if you want to prepare for university or higher education later. Types include:

- **STX (Alment gymnasium)** – Broad academic program with focus on humanities, sciences, and social studies.
- **HHX (Handelsskole)** – Focus on business, economics, marketing.
- **HTX (Teknisk gymnasium)** – Focus on science, technology, and engineering.
- **HF (Højere forberedelseseksamen)** – A shorter 2-year general upper secondary program, good if you want a faster route to higher education.

 *Best if:* You enjoy school subjects, want to keep options open, and consider university later.

Erhvervsuddannelser (Vocational education / apprenticeship)

- These programs combine school with practical training (workplace apprenticeship).
- Areas like IT, health care, mechanics, culinary arts, electrician, carpenter, etc.

 *Best if:* You prefer hands-on learning, want to work sooner, or know your career interest.

Kombinerede uddannelser (EUX)

- A mix of vocational training and gymnasium-level education.
- Gives you both a vocational qualification **and** the right to apply for university.

 *Best if:* You want both practical skills and the option for higher education.

What to consider

👉 **Your interests:** Do you prefer academic work (reading, writing, theory) or practical tasks (building, creating, doing)?

👉 **Your strengths:** Are you stronger in subjects like math, science, languages, or in creative/technical skills?

👉 **Future dreams:** Do you already have a career goal (e.g. doctor, engineer, designer, entrepreneur) or want to explore first?

🌱 Example pathways

- If you like **science / tech** → HTX or STX (with science line), or EUX tech.
 - If you like **business / economics** → HHX or EUX business.
 - If you like **practical work / crafts** → Erhvervsuddannelse or EUX.
 - If you are **unsure** → STX (general upper secondary) keeps most doors open.
-

📝 My recommendation

Since you are fluent in Danish and have completed primary school in Denmark, **STX** could be a good choice if you want to keep your options wide for now. It gives you 3 years to explore different subjects before deciding on university or other studies.

Alternatively, if you know you enjoy practical work and want a faster path to a job, **EUX** gives you both vocational training and eligibility for higher education.

🌍 Other thoughts

➡ Your background as a bilingual person from a multicultural family is a strength! It could give you an edge in fields like international business, diplomacy, education, or social work.

➡ Denmark's system also allows flexibility — it's okay to change direction later!

If you tell me a bit more about your interests, I can suggest a more tailored path (e.g. "I like computers" or "I want to help people"). Want to share? 😊
