

Uddannelsesmuligheder efter Folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Barbados. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a really thoughtful question — and it's great that you're reflecting on your next steps at this point! Since you just finished primary school (which in Denmark means **Folkeskole** around 9th or 10th grade depending on your path), you're at an important crossroads where you can choose different educational directions. Let's break it down so you can see what fits you best.

Your main options after Folkeskole

In Denmark, after primary school, students typically choose between:

General upper secondary education (Gymnasiale uddannelser)

If you enjoy academic subjects and might want to go to university later, this is a good choice.

- **STX** (Studentereksamen): Broad academic program with sciences, humanities, social studies — flexible.
- **HHX** (Higher Commercial Examination): Focus on business, economics, and international trade.
- **HTX** (Higher Technical Examination): Emphasis on technology, science, IT, and innovation.
- **HF** (Higher Preparatory Examination): A shorter, 2-year program (often for those who didn't complete 10th grade or want a more practical academic path).

Why choose this?

- You like school subjects and learning.
- You want to keep your options open for university.
- You're unsure about your career path but want a solid foundation.

Vocational education and training (EUD / Erhvervsuddannelse)

If you want to start learning a trade or practical skill while working part-time as an apprentice (praktikplads).

- Examples: carpenter, electrician, chef, healthcare assistant, mechanic.

Why choose this?

- You prefer practical, hands-on learning.
- You want to enter the workforce faster.
- You're interested in skilled trades or specific professions.

Combination programs

There are options that mix school and work experience:

- **EUX:** Combines vocational training with gymnasium-level academic subjects → you can get both a trade and university eligibility.
- **10th grade:** If you want an extra year to mature, improve your grades, or explore options.

How to decide?

Ask yourself:

- Do I enjoy schoolwork, reading, writing, and exams? (Consider STX, HHX, HTX, HF)
- Do I like working with my hands, creating things, or learning by doing? (Consider EUD, EUX)
- Do I have a passion already (e.g., technology, business, health, art)?
- Where do I see myself in 5-10 years? (Do I want university, or am I eager to start working?)

Other tips:

- Attend open house events (Åbent hus) at local schools.
- Talk to a guidance counselor (uddannelsesvejleder) — they can help you explore your strengths.
- Think about your cultural background too! Maybe international business (HHX) or hospitality (EUD) might connect with your interest in both Denmark and Barbados.

Example paths:

- If you're academically strong and want to go to university later → **STX or HHX**
- If you like technology, design, and building → **HTX or EUX**
- If you're practical and want to work sooner → **EUD**
- If you're unsure → **10th grade** to explore and decide

Final advice:

You have time — don't feel pressured to pick the "perfect" path right away. Many people switch or combine paths in Denmark. If you tell me more about your interests (subjects you like, hobbies, dreams for the future), I can help you narrow it down further! 

Would you like help exploring specific programs or schools in your area?
