

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Belgium. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

Thanks for sharing your background—that helps a lot in giving meaningful suggestions! Since you're 16, have finished primary school (which I assume means *folkeskole*), and are fluent in Danish, you're at an exciting crossroads. Let's break down your options and what might suit you based on your situation and interests.

Main educational paths in Denmark after primary school

At this stage, you generally choose between two broad routes:

- 1 **General upper secondary education (gymnasial uddannelse)**
- 2 **Vocational education and training (erhvervsuddannelse)**

1 General upper secondary (for academic and university path)

If you enjoy academic subjects and are considering university later on, you might look at:

- **STX (studentereksamen)** – broad, academic focus with humanities, science, and social science tracks.
- **HHX (higher commercial examination)** – focus on business, economics, and international trade.
- **HTX (higher technical examination)** – focus on technology, natural sciences, IT.
- **HF (higher preparatory exam)** – shorter, 2-year course, good for adults and students who want more flexibility.

✓ *Why this could suit you:*

- Keeps many doors open for university later.
- You can choose subjects and study areas that interest you (e.g., languages, sciences, business).
- If you feel comfortable with academic learning and exams.

2 Vocational education and training (EUD / EUX)

If you're eager to learn by doing and enter the job market sooner (or mix work + study):

- **EUD (erhvervsuddannelse)** – hands-on training, apprenticeship model in trades, crafts, services.

- **EUX (a hybrid)** – combines vocational training + upper secondary exam, so you can work or continue to university.

✓ *Why this could suit you:*

- You learn a profession (e.g. electrician, chef, carpenter, IT supporter).
- Earn while you learn during apprenticeship.
- EUX gives flexibility if you later want higher education.

Other factors to consider:

Do you have an idea of your interests?

- If you like science/technology: HTX might be great.
- If business appeals: HHX could suit you.
- If you enjoy general studies or are unsure: STX is the most flexible.

Language strengths

Since you're fluent in Danish and have Belgian roots, you may have good French/Dutch/English skills too—this could be a real asset, e.g. in HHX or STX language-heavy tracks.

Future plans

- Do you dream of university? General upper secondary education is the path.
- Do you want to start a career sooner or learn a trade? Vocational education could be the right fit.

My recommendation:

If you're unsure and want to keep options open:

 Consider **STX** — broad, academic, flexible.

If you're interested in business/international trade (maybe linked to Belgium roots?):

 Consider **HHX**.

If you're passionate about making/doing/practical work, but want the option for uni later:

 Consider **EUX**.

Next steps:

- Visit open house events (åbent hus) at local gymnasiums/vocational schools.
- Talk to guidance counsellors (*uddannelsesvejleder*).
- Consider doing a trial period (brobygning / erhvervspraktik) to see what fits.

If you'd like, I can help you:

- ✓ Explore specific schools/programs near where you live.
- ✓ Make a pros/cons list for different paths.
- ✓ Draft questions to ask at open house visits.

Would you like help with any of that? And do you have particular interests or goals already? 😊
