

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bhutan. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great question, and it's excellent that you're thinking ahead. Since you've just finished primary school (which typically ends around 9th or 10th grade in Denmark), you're at a point where you choose between different upper secondary education options. The best path depends on your interests, strengths, and long-term goals, but here's a breakdown of your main options in Denmark:

🎓 1. Gymnasiale uddannelser (Academic Upper Secondary Education)

These are general education paths that prepare you for university.

STX (Studentereksamen)

- **Focus:** Broad mix of humanities, science, and social sciences.
- **Best for:** Students who want flexibility and might want to go to university later.
- **Length:** 3 years.

HHX (Higher Commercial Examination)

- **Focus:** Business, economics, marketing.
- **Best for:** Students interested in business, international trade, or economics.
- **Length:** 3 years.

HTX (Higher Technical Examination)

- **Focus:** Technology, science, IT.
- **Best for:** Students interested in engineering, tech, or science-related careers.
- **Length:** 3 years.

HF (Higher Preparatory Examination)

- **Focus:** A more compact and practical alternative.
- **Best for:** Students who want a shorter path to university or specific professional schools.
- **Length:** 2 years.

🔧 2. Erhvervsuddannelser (Vocational Education and Training - EUD)

If you like practical work or want to get into the job market sooner, vocational training could be ideal.

- **Focus:** Hands-on work like carpentry, hairdressing, electrician, health care, culinary, etc.
- **Length:** Usually 3–5 years with apprenticeships (paid work experience).
- **Best for:** Students who want to work in a trade or practical profession.

You can also do **EUX**, which combines vocational training with subjects from gymnasiale uddannelser so you can still go to university later.

✨ How to Choose?

Here are some things to consider:

Question	If yes, then consider:
Do you want to go to university?	STX, HHX, HTX, HF
Are you passionate about business?	HHX
Are you into science, IT, or engineering?	HTX
Do you like working with your hands?	EUD or EUX
Want both practical and academic options?	EUX
Prefer learning in a more practical and job-oriented way?	EUD

🕒 My Suggestion (Based on Your Background)

Since you're fluent in Danish, born and raised in Denmark, and likely understand both Danish and Bhutanese culture, you have a unique perspective. You could thrive in:

- **STX or HHX**, if you're academically strong and interested in things like culture, languages, or business.
- **EUX**, if you're practical but still want academic flexibility.
- **HTX**, if you love tech and science.

If you're unsure, visiting **educational fairs (uddannelsesmesser)** or taking a **brobygning (bridge course)** can help you try out different paths before you decide.

If you tell me more about your **interests** (e.g., do you like science, people, business, hands-on work, etc.), I can help you narrow it down even more.
