

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Burkina Faso. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

It's great that you're thinking carefully about your next steps — and you're in a strong position with your background! Let's break this down so I can give you a helpful recommendation.

Your situation

- You're 16 years old and finished primary school (which I assume means you completed **Folkeskole** or **9th/10th grade**).
- You're fluent in Danish — that opens all educational doors in Denmark.
- You have cultural roots in Burkina Faso, which could be an advantage in international settings or in fields like languages, global studies, or development.

Your main options after Folkeskole

In Denmark, you typically choose between:

Gymnasiale uddannelser (general upper secondary education, usually 3 years)

- STX (studentereksamen): broad, academic, focus on languages, science, social studies.
- HHX (higher commercial exam): business, economics, marketing focus.
- HTX (higher technical exam): technology, science, innovation.
- HF (2-year general education): shorter, more practical/academic mix.

Erhvervsuddannelser (EUD) (vocational education and training, usually 2-5 years depending on trade)

- Apprenticeship-based learning with work experience (e.g. electrician, carpenter, chef, health care assistant).

Kombinerede forløb

- EUX (combination of vocational training + gymnasial level exams) → gives both practical skills and access to higher education.

What path fits you?

It depends on:

-  Your interests: Do you enjoy academic subjects (math, science, languages), or do you prefer practical,

hands-on work?

✓ Your future goals: Do you want to go to university? Start working sooner? Travel?

✓ Your strengths: Are you good at studying for exams? Or more motivated by creating, building, or doing?

☀ Some suggestions

💡 **If you want to keep doors open for university and you enjoy academic subjects →**

STX is the most general and flexible. You can choose focus areas (e.g. science, languages, social studies).

💡 **If you're interested in business, trade, or entrepreneurship →**

HHX might suit you well, especially if you're thinking about international trade, marketing, or starting your own business.

💡 **If you like technology, innovation, or science →**

HTX could be ideal — lots of project work, lab work, and a modern, technical approach.

💡 **If you want to work sooner, or enjoy practical learning →**

An EUD or EUX could lead to a skilled trade, and EUX keeps university options open.

💡 **If you want a shorter academic program →**

HF is more focused, with less time before you can move on to university or other studies.

🌐 Extra thought

With your background, you might eventually explore:

- **International business or diplomacy** (HHX + university in international studies)
- **Engineering or technology** (HTX + technical university)
- **Health care or social work** (HF or EUD + further training)
- **Skilled trade with EUX** → become highly employable both in Denmark and abroad.

👉 What you could do next

- Talk to an *uddannelsesvejleder* (education counselor) — they can help you find programs that match your interests.
- Visit open house days at different schools.
- Try out a *brobygning* (bridge-building course) if you're unsure — you can experience different educational paths before choosing.

💬 **If you want**, tell me a bit more about what subjects you like most, what kind of work you imagine doing, or what kind of life you want (e.g. lots of travel, working with people, building things) — and I can give you a more specific recommendation!
