

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Burundi. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a really thoughtful question — and it's great that you're reflecting on your next step! Let's break it down so you can make a choice that fits you. Since you just finished **primary school** (which I assume means *folkeskolen* or 9th/10th grade equivalent in Denmark), you now have several good options in the Danish educational system.

First, ask yourself:

- **What are my interests?** (e.g. academic subjects, practical skills, creative fields, working with people)
- **Do I prefer theory or practice?**
- **Do I want to go to university one day? Or get into work sooner with a profession?**
- **What environment do I thrive in?** (small classes, lots of hands-on work, independent study?)

Main educational paths after primary school in Denmark:

1 Gymnasiale uddannelser (General upper secondary education)

If you want to keep doors open for university, these are great:

- **STX (Alment gymnasium)** – Broad, academic focus. Good if you like humanities, sciences, languages.
- **HHX (Handelsskolens gymnasium)** – Focus on business, economics, marketing.
- **HTX (Teknisk gymnasium)** – Focus on technology, science, innovation.
- **HF (Højere Forberedelseseksamen)** – Shorter (2 years), good if you prefer practical orientation or want to qualify for further study without a full 3-year program.

 *Good if:* You're not sure yet what you want, but you think university might be in your future.

2 Erhvervsuddannelser (Vocational education and training - EUD)

- Learn a trade or profession, with lots of practical training and apprenticeship (fx electrician, carpenter, hairdresser, chef, social & health worker).
- Combine school with paid work as an apprentice.

👉 *Good if:* You like learning by doing and want to enter a skilled profession directly or after a shorter education.

3 Kombinerede forløb (e.g. EUX)

- Combines vocational training with gymnasium-level courses, so you can both learn a trade *and* keep the option of university open.

👉 *Good if:* You want the security of a trade, but also the flexibility to study further later.

🇩🇰 My recommendation (based on your background and age):

✅ Since you're fluent in Danish, grew up in Denmark, and have just finished primary school —

👉 Think about **STX**, **HTX**, or **HHX** if you want to explore academic interests and possibly go to university.

👉 Consider **EUX** if you are drawn to both practical work and academic learning — it's a flexible path.

👉 Choose **EUD** if you already know there's a specific trade or craft you're passionate about.

💡 Next steps

- Visit open house events (*Åbent Hus*) at local schools.
- Talk to a **UU-vejleder** (educational guidance counselor) — they can help you match your interests to the right program.
- Try job shadowing or internships to explore options!

⚡ **Tip:** Because of your multilingual and multicultural background (Burundian heritage + Danish upbringing), you may have unique strengths in language, communication, or cross-cultural understanding. These can be valuable in many paths — like international business (HHX), diplomacy (STX), or social work (EUD / EUX).

If you'd like, tell me more about:

- What subjects you enjoy?
- Do you see yourself going to university?
- Do you want to work with people, technology, nature, business, etc.?

I can help narrow down your options even more! 😊
